

March 7, 2025

Dear Member of Congress,

The 122 undersigned organizations, tribes, companies and elected officials are writing on behalf of our millions of members and supporters to express our strong opposition to S. 544 & H.R. 1366, The Mining Regulatory Clarity Act (MRCA). The legislation includes sweeping provisions that would weaken the already outdated 1872 Mining Law and give even more control over our public lands to the mining industry.

Most mining in the United States is governed under a 150-year-old, extremely permissive law enacted when Ulysses S. Grant was president. The law disempowers frontline communities, has no environmental guardrails, and doesn't require mining companies to pay a royalty on the billions of dollars of publicly owned minerals they extract. This mining law governs mining on public lands that are currently being dismantled by the Administration and their allies with active threats to sell off millions of acres of our lands, roll back protections such as National Monuments and mineral withdrawals in secret, and firing thousands of workers whose jobs are essential for the future existence of our public lands. If you combine the antiquated mining law with the dismantling of our public lands, along with the now unpredictable National Environmental Policy Act (NEPA) process, due to President Trump's executive actions and recent court rulings, communities are now more at risk than they were even a year ago.

History already paints a clear picture of the risks posed by irresponsible, deregulated mining for critical resources across the country. The EPA estimates that 40% of headwaters and 50% of lakes have been contaminated by hardrock mines, decimating watersheds and the communities that depend on them for freshwater, including drinking water. Recent research reveals that the vast majority of critical mineral resources in the United States are located within 35 miles of Native American reservations. As demand for hardrock minerals grows domestically and globally, it is critical that we ensure mining laws and standards protect communities and the environment while strengthening and securing our supply chains. Unfortunately, the MRCA would take us backward, not forward, and create more conflict over mines, not less.

First, the MRCA would allow mining companies to claim indefinite numbers of millsites<sup>1</sup> on public land, without meaningful limitations, where multinational mining companies can permanently dump toxic waste and construct infrastructure like pipelines and roads. These millsites could block public lands from being used for more suitable purposes, such as renewable energy projects, watershed protection, cultural resources, and recreation. This provision would remove any effective limits on millsites and eliminate the requirement that

---

<sup>1</sup> Section 42 of the Mining Law provides that the holder of a valid mining claim may also claim nearby non-mineral-bearing land to support its mining claim. Such nonmineral land is known as a "mill site," and no mill site "shall exceed five acres." 30 U.S.C. § 42.

such claims be located only on non-mineral land, a key feature that prevents lands with valuable minerals from being buried under waste or made inaccessible.

Second, several additional provisions contained within MRCA would weaken, if not negate, over a century of precedent that has limited the amount of damage to public land caused by our permissive mining law. According to current law, operators must first prove that there are in fact valuable minerals on a mining claim before they gain the right to conduct large-scale operations on those claims. Additionally, operators cannot conduct operations outside of their claims without obtaining further permits. MRCA could render these requirements meaningless by codifying a regulation that defines all activities related to mining under the term "operations," even if they are not directly on a mining claim. This could allow mining companies to build pipelines, roads, and powerlines and conduct other activities across public lands without ever having to get a permit for them.

The MRCA does not contain any meaningful limits to prevent abuses of the millsite provision. It states that mining companies may use public lands in accordance with an approved plan of operations. But that is of little assistance given the bill grants mining companies an unlimited, statutory right to use those lands—a right that cannot be denied in a mining plan of operations. The offered protections are thus no protections against the giveaway of public lands.

Finally, MRCA includes a savings clause that states mining companies still have to prove that there are valuable mineral deposits on claims within lands that have been withdrawn from mining. However, the exclusion of similar language for claims on unwithdrawn lands could be read by a court to imply that Congress intended to eliminate the requirement for such checks on unwithdrawn lands, which make up the vast majority of public lands. Altogether, these sections essentially give mining companies a nearly unlimited right to dump waste across an indefinite number of acres of public lands under the proposed millsites provision.

This bill's provisions will have a devastating impact on frontline communities, cultural resources, and sensitive ecosystems. Instead of passing this legislation, Congress should enact true reforms to our mining laws such as those identified by the 2023 Interagency Working Group on Mining Laws, Regulations, and Permitting, especially those that would close loopholes for foreign companies, improve environmental standards, and create competitive leasing to balance the nation's clean energy mineral needs with other public land uses. We urge you to oppose the passage of S. 544 & H.R. 1366, whether as a standalone bill or as a part of a larger legislative package.

Sincerely,
