RE: UG 490/Application of NW Natural for a General Rate Revision
Opening Testimony by Coalition of Communities of Color, Climate Solutions, Verde,
Columbia Riverkeeper, Oregon Environmental Council, Community Energy Project, and
Sierra Club (“Coalition”)

Dear Filing Center:

Attached for filing, please find the Coalition’s Opening Testimony for the above-referenced proceeding. The consolidated PDF for filing includes testimony by Brad Cebulko (Exhibit Coalition/100); Nora Apter and Meredith Connolly (Exhibit Coalition/200); Charity Fain, Anahi Segovia Rodriguez, and Nikita Daryanani (Exhibit Coalition/300).

This filing contains confidential non-public information that is being provided to your office and designated parties under separate cover, pursuant to General Protective Order No. 23-132. The publicly filed version of the testimony is redacted and confidential exhibits have been withheld.

Please feel free to reach out to me directly with any questions about this filing.

Sincerely,

Jaimini Parekh
Senior Attorney, OSB No. 226337

TABLE OF CONTENTS

1. Introduction..... 3

2. Summary of Recommendations..... 5

3. Line Extension Allowance 6

 A. Public policy, market trends, and risks to existing customers are at odds with continued gas system expansion (which the Company’s LEA is encouraging)..... 8

 B. Based on the public policies, market trends, and customer risks described above, the Commission should eliminate the LEA entirely 18

 C. Even if the LEA were continued, NW Natural’s new proposed LEA methodology is unreasonable. 21

 D. NW Natural billed costs to ratepayers for residential line extensions that exceeded its approved Service Line Extension Allowance 37

 E. Main Line Extension Allowance 41

4. New Premise Customer Charge..... 46

1 **1. Introduction**

2 **Q. Please state your name and business address.**

3 A. My name is Bradley Cebulko. My business address is 24125 47th Ave. SW, Vashon, WA
4 98070.

5 **Q. By whom are you employed and in what capacity?**

6 A. I am the founder of CEB Energy Consulting. CEB Energy Consulting provides technical,
7 economic, and policy analysis to public interest organizations who participate in public
8 utility commission proceedings.

9 **Q. What did you review in preparation for this testimony?**

10 A. I have read Northwest Natural's (or "Company") filings pertaining to docket UG-490 and
11 many of the Company's discovery responses.

12 **Q. On whose behalf are you submitting testimony?**

13 A. I am submitting testimony on behalf of Coalition of Communities of Color, Climate
14 Solutions, Verde, Columbia Riverkeeper, Oregon Environmental Council, Community
15 Energy Project, and Sierra Club.

16 **Q. Are you sponsoring any exhibits?**

17 A. Yes. I am sponsoring exhibits Coalition/101 through Coalition/111. All sponsored
18 exhibits are attached to this testimony.

19 **Q. Please summarize your professional experience.**

20 A. I founded CEB Energy Consulting in March 2024. Previously, I was a Senior Manager at
21 Strategen Consulting from 2021 to 2024. At Strategen, I led the gas transition practice, as
22 well as provided analysis on other utility regulatory issues including electric and gas
23 long-term planning and new regulatory business models. Prior to joining Strategen, I

1 worked at the Washington Utilities and Transportation Commission (“UTC”) for 8 years.
2 From 2013-2016, I was an analyst with the UTC Commission Staff focused on electric
3 and natural gas integrated resource planning (“IRP”), electric and natural gas energy
4 efficiency programs, and new program design and implementation. From 2016-2021, I
5 was an advisor to the Washington State Commissioners, where I led Commissioners’
6 review of major filings and adjudications, natural gas general rate cases, purchase gas
7 adjustments, rulemakings, and natural gas IRPs. From 2019 through 2020, I led the
8 UTC’s rulemakings to implement Washington state’s Clean Energy Transformation Act.

9 **Q. Have you testified before the Oregon Public Utilities Commission previously?**

10 A. Yes. I testified on behalf of a coalition of environmental intervenors in Avista
11 Corporation’s 2023 General Rate Case in Docket UG 461, and for Vitesse, LLC,
12 regarding Pacific Power’s Accelerated Commitment Tariff in Docket UE 399.

13 **Q. Have you testified in regulatory proceedings in other states?**

14 A. Yes, I have testified and provided comments before several Public Utility Commissions,
15 including in Washington, Illinois, Minnesota, Michigan, Colorado, Massachusetts, and
16 Connecticut. My resume and summary of qualifications, attached as Exhibits
17 Environmental Intervenors/101 and 102, provide additional detail.

18 **Q. How is your testimony organized?**

19 A. My testimony is organized into the following sections:

- 20 • Section II: I summarize my recommendations to the Commission on issues
21 addressed in Sections III and IV.
- 22 • Section III(A) and (B): I discuss why it is no longer in the public interest for the
23 Oregon Public Utilities Commission to allow gas utilities to offer Line Extension

1 Allowances (“LEA”). I find that continuing to allow the utility to use ratepayer
2 money to subsidize the expansion of the gas system through line extension
3 allowances is costly and risky for customers as it makes it more challenging for
4 the utility to meet its emissions reduction requirements and increases the risk that
5 some of the investments will be underutilized or stranded in the future.

6 • Section III(C): I also explain why, even if LEAs were continued, the Company’s
7 proposed new LEA methodology is flawed. Specifically, the Company makes
8 several problematic assumptions including not planning to meet likely emissions
9 reductions goals, using too long of a planning period, and using uncertain future
10 cost assumptions such as forecasted capital expenditures.

11 • Section III(D) and (E): I discuss why it is inappropriate for the Company to
12 provide LEAs to individual customers in excess of the Schedule X LEA. There
13 are numerous instances of this inappropriate practice in recent years.

14 • Section IV: I discuss why the Company’s New Premise Customer Charge is not
15 in the public interest because it decreases the incentive for efficient load
16 management, disproportionately impacts low-income customers, and is a radical
17 step to address the Company’s decoupling mechanism, among other reasons.

18 **2. Summary of Recommendations**

19 **Q. Please summarize your recommendations.**

20 **A.** In this testimony I make the following recommendations:

- 21 • **Service and Main Line Extension Allowances:** I recommend the Commission
22 eliminate service and main line extension allowances for residential and
23 nonresidential customers.

- 1 • **Remove Line Extension Allowance from the Revenue Requirement:** In
2 accordance with my recommendation to eliminate service and main line
3 extensions, I recommend removing the Company’s forecasted revenue
4 requirement attributable to line extension allowances of \$419,000.
- 5 • **Excess Service and Main Line Extension Allowances:** I recommend that the
6 Commission disallow \$2.2 million in service line extension allowances given to
7 individual customers in excess of the LEA cap identified in Schedule X during the
8 Base Year, 2023.
- 9 • **New Premise Customer Charge:** I recommend the Commission reject the
10 Company’s proposal to set the customer charges to \$26.25 and \$24.25 for new
11 premise residential and new premise multi-family homes.

12 **3. Line Extension Allowance**

13 **Q. Is the Company proposing a modification to its LEA in this case?**

14 A. Yes. The Company is proposing modification to its LEA based on a new methodology.
15 Despite the Commission’s order in the previous case revising the LEA steadily
16 downwards over time to incorporate emissions reduction compliance costs,¹ the
17 Company is nevertheless proposing a higher LEA for the average residential customer.
18 The Company is also proposing to create a tiered allowance structure that provides a
19 larger allowance to customers that consume fewer therms. Table 1 and Table 2 show the

¹ *In the Matter of Northwest Natural Gas Company, dba NW Natural, Request for a General Rate Revision, Docket No. UG 435, Order No. 22-388, at 48, 51 (Oct. 24, 2022) (finding that “NW Natural’s LEA should be revised downward” and that “the LEA should not remain static at \$2,300, in light of the demonstration that has been made that a more significant downward adjustment is ultimately warranted in order to appropriately balance the costs associated with new customers”).*

1 Company’s current LEA schedule as compared to the Company’s proposed LEAs on
2 supplemental testimony.

3 *Table 1: Current LEA as Approved by OPUC in 2022 General Rate Case*

	Margin	Residential Cap
Prior to 10/31/22	5x	\$2,300
11/1/2023 – 10/31/2024	4x	\$1,850
11/1/2024 and after	3x	\$1,380

4
5 *Table 2: NWN Proposed LEA (Supplemental Testimony)²*

Proposed allowance by residential consumption level				
Use per customer in annual therms	< 250	251 – 450	451 -650	> 650
Allowance	\$3,724	\$3,338	\$2,952	\$2,227

6 **Q. What is your high-level reaction to the Company’s proposal to significantly increase**
7 **its residential LEA?**

8 A. LEAs are counterproductive for meeting Oregon’s decarbonization goals, increase
9 customer costs in the near-term, and increase customer costs and risks over the long run.
10 The energy landscape is rapidly evolving and there are likely to be profound changes to
11 the Company’s business model over the next 20 years due to several significant policy
12 and market shifts in Oregon and across the country that increase the risk to the
13 Company’s current business model. Yet the Company does not have a feasible plan for
14 complying with state law. It is clear that a “business as usual” approach to planning the
15 gas system (including the traditional approach to LEAs) is insufficient to meet both rapid

² Kravitz-Therrien/Page 21, lines 2 – 14.

1 changes in the gas sector and the Company's statutory requirements. In fact, the
2 Company's LEA proposal is directly at odds with both the Commission's 2023 order in
3 the Company's previous rate case and Oregon climate policy. Moreover, the Company's
4 proposal in this case also increases customer costs in the near term and increases the risk
5 of significant costs and stranded assets in the long run. I will elaborate on these points in
6 the next section of my testimony.

7 **A. *Public policy, market trends, and risks to existing customers are at odds with continued***
8 ***gas system expansion (which the Company's LEA is encouraging)***

9 **Q. Will you please discuss the significant policy and market shifts underway?**

10 A. Yes. And to preface this discussion, many of these same issues were identified in the
11 previous rate case by witness Edward Burgess,³ namely that the traditional economic
12 rationale for LEAs no longer applies when the state has identified societal
13 decarbonization as a public policy and the traditional gas utility business model is
14 uncertain. As a result, much of what I will discuss has been previously identified and
15 those issues remain to this day.

16 First, the state has set aggressive emissions reduction targets. In 2020, Governor
17 Brown signed an Executive Order directing the state to reduce and regulate greenhouse
18 gas emissions to at least 45 percent below 1990 emissions levels by 2035 and at least 80
19 percent below 1990 levels by 2050.⁴ The Executive Order directed the Commission to
20 help facilitate the state's achievement of the emissions goals and determine whether

³ *In the Matter of Northwest Natural Gas Company Request for a General Rate Revision*, Docket No. UG-435 Direct Testimony of Edward Burgess. April 22, 2022, <https://apps.puc.state.or.us/edockets/edocs.asp?FileType=HTB&FileName=ug435htb16597.pdf&DocketID=23085&numSequence=97> (last visited April 18, 2024).

⁴ Or. Exec. Order 20-04 at 4, https://www.oregon.gov/gov/eo/eo_20-04.pdf (last visited April 17, 2024).

1 utility portfolios and customer programs reduce risks and costs to utility customers by
2 making rapid progress towards reducing emissions.⁵ The Executive Order also directed
3 the Oregon Department of Environmental Quality (“DEQ”) to establish an emissions cap-
4 and-reduce program.⁶

5 In 2022, DEQ established the Climate Protection Program (“CPP”), which set a
6 declining cap on GHG emissions for each of the Oregon gas distribution companies. The
7 Oregon Court of Appeals invalidated the rules in December 2023 finding that DEQ did
8 not fully comply with the rulemaking notice requirements. My understanding is that DEQ
9 is undergoing a subsequent CPP rulemaking, which will once again set an enforceable
10 and declining limit, or cap, on greenhouse gas emissions from fossil fuels beginning in
11 2025.⁷

12 Given the stated intent of the agency with authority to enact such a policy and the
13 fact that it has initiated the process to do so, there is a high likelihood that the Company
14 will have similarly strict requirements in the subsequent CPP regulations, and the
15 Company does not have a reasonable plan for achieving those targets while maintaining,
16 much less expanding, its current distribution system. Even to the extent the details of the
17 forthcoming requirements cannot be fully known at this point, continuing to offer LEAs
18 is directionally inconsistent with any form of cap-and-reduce program to meet the state’s
19 emissions reduction targets.

⁵ *Id.* at 5

⁶ *Id.* at 4.

⁷ Or. Dep’t of Env’t Quality, Climate Protection Program 2024, Proposed Rule Website,
<https://www.oregon.gov/deq/rulemaking/Pages/ CPP2024.aspx> (last visited Apr. 10, 2024).
Coalition experts Nora Apter and Meredith Connolly discuss the CPP process in some detail.

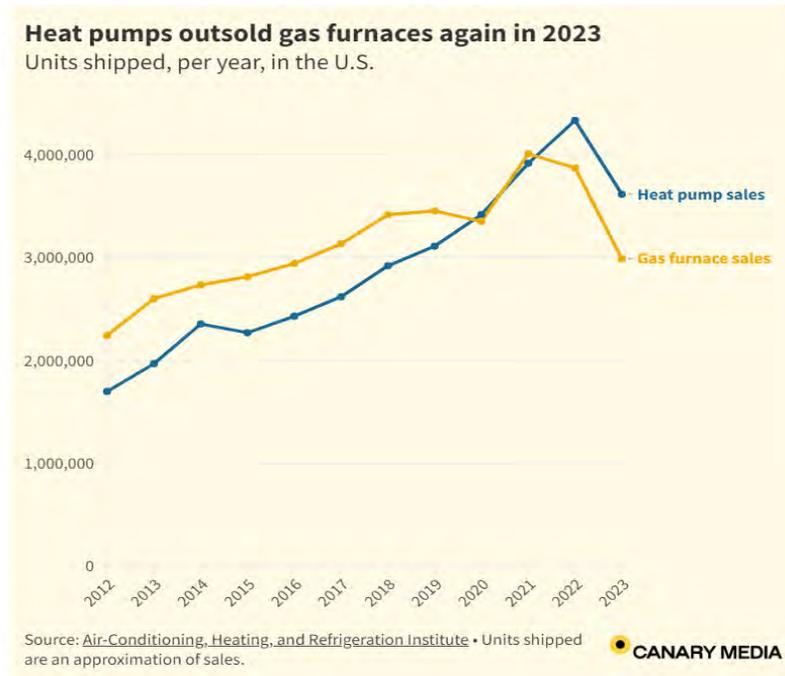

1 Concurrent with the policy changes, market shifts have also occurred. Highly
2 efficient electric appliances are now often cost-competitive with their gas appliance
3 counterparts,⁸ and consumers are taking notice. As shown in Figure 1, electric heat
4 pumps have now outsold gas furnaces for the second year in a row. These data do not
5 account for the impact of the Inflation Reduction Act, which should help further
6 accelerate the adoption of electric appliances through the program’s generous appliance
7 rebates and tax incentives.⁹

⁸ See, Kenji Takahashi et al., *Toward Net Zero Emissions from Oregon Buildings* Synapse Energy Economics at vi-vii (prepared for Sierra Club) (June 23, 2022), <https://www.synapse-energy.com/sites/default/files/Net-Zero-Emissions-from-Oregon-Buildings-21-127.pdf> (last visited Apr. 17, 2024) (finding that installing an electric heat pump instead of a gas furnace has the “same or less” average incremental cost in Portland and Bend, and that all-electric construction yields annual bill savings of \$161 in Portland and \$192 in Bend); Rewiring America, *Bringing Infrastructure Home* at 88, <https://content.rewiringamerica.org/fact-sheets/bringing-infrastructure-home/bringing-infrastructure-home-50-state-report-on-us-home-electrification.pdf> (last visited Apr. 17, 2024) (finding that 100% of Oregon households using natural gas would save on annual energy bills by electrifying); RMI, *All-Electric New Construction: A Good Deal for Oregon* <https://rmi.org/insight/state-level-building-electrification-factsheets/> (last visited Apr. 17, 2024) (finding that all-electric homes in Eugene cost \$1600 less to construct than mixed-fuel homes, with a range of upfront cost savings and \$390 in average annual operating cost savings from all-electric construction statewide).

⁹ Beginning in 2023, state programs offer low- and moderate-income households’ rebates for heat pumps at the point-of-sale, cutting costs of purchase and installation up to \$8,000. If home electrical upgrades are needed to integrate new heat pumps, rebates of up to \$4,000 are available to households. See <https://www.whitehouse.gov/cleanenergy/> (last visited Apr. 17, 2024)

1

Figure 1: Sales of Heat Pumps and Gas Furnaces from 2012 – 2023¹⁰

2 **Q. Will you please explain how LEAs increase near-term costs and increase customer**
3 **risk and costs over the long run?**

4 A. When the Company provides an allowance to a new customer, that cost is socialized to
5 existing customers. The allowance thus initially increases costs to all customers. There
6 can eventually be a net benefit to existing customers after the Company has fully
7 recovered the customer's cost to join the system. However, if and when that benefit will
8 occur depends in large part on the LEA calculation methodology. This methodology
9 necessarily includes many assumptions about future actions to be taken by the new
10 customer (e.g., whether to remain on the gas system or convert to electric appliances), the
11 Company (e.g., what capital investments should be made), and the Commission (e.g.,

¹⁰ Alison Takemura, Canary Media, *Heat pumps outsold gas furnaces again last year – and the gap is growing* (Feb. 13, 2024), <https://www.canarymedia.com/articles/heat-pumps/heat-pumps-outsold-gas-furnaces-again-last-year-and-the-gap-is-growing> (last visited Apr. 17, 2024).

1 whether future rate increases should be approved). In the present case, the Company is
2 proposing to use a calculation that would not make existing customers “whole” (or
3 “indifferent”) for 25 years. That is, the LEA imposes a net cost onto customers for an
4 estimated 25 years.¹¹ Later in my testimony, I will more fully address my concerns with a
5 25-year calculation, as well as several other problematic assumptions.

6 The LEA also increases customers’ long-term costs and risks. Distribution system
7 pipelines typically have service lives of 40 – 60 years for service lines and 55 – 70 years
8 for mains,¹² and depreciation schedules are typically aligned with estimated service lives.
9 In other words, customers will be paying for the Company’s capital investments for many
10 decades to come. Furthermore, there is a risk that the gas system will look very different
11 in several decades. Due to naturally occurring cost-effective electrification and policies
12 that promote building electrification, it is likely there will be fewer customers on the gas
13 system using fewer therms of gas. If there is less throughput, but the system does not
14 correspondingly decrease in size, there will be rate increases which disproportionately
15 impact low-income and vulnerable customers.

16 Indeed, the Company’s testimony cites to a Brattle Group report titled “The
17 Future of Gas Utilities Series” that highlights this concern.¹³ Writing that the energy
18 transition is already underway, the Brattle Report states that “[u]tilities will likely

¹¹ The Company’s DCF analysis suggests a “breakeven” timeframe of 10-11 years. However, this characterization is misleading since it is simply based on when cash flow from the new customer becomes positive and does not truly reflect a breakeven timeframe from a Net Present Value perspective. Instead, the true breakeven period from Net Present Value perspective corresponds to the Company’s target of 25 years.

¹² NW Natural/1600, Spanos/Page 36.

¹³ NW Natural/400, Coyne-Nelson/Page 47, lines 3 – 16. The Brattle Group, *Future of Gas Utilities Series, Part 1: Assessing Risk* (Aug. 2021), https://www.brattle.com/wp-content/uploads/2022/01/The-Future-of-Gas-Utilities-Series_Part-1.pdf (last visited April 17, 2024).

1 continue investing in their existing system for safety and reliability but need to recover
2 those costs from a shrinking customer base” which “puts remaining customers at risk, a
3 ‘death spiral’ trend pushing more customers to electrification.” In addition, the
4 Company’s continued capital investments are at risk of being stranded if the assets are
5 underutilized or abandoned. The Brattle Group report warns that nationally “up to \$150 –
6 180 billion of gas distribution assets could be under-recovered as a result of the
7 transition.”¹⁴

8 Finally, the LEA incentivizes the expansion of the gas system. As I will explain in
9 greater detail later, the Company does not have a realistic plan to both expand its gas
10 delivery system and meet the state’s emissions reduction requirements. By incentivizing
11 the expansion of the gas system, the LEA increases the Company’s and customers’ risks
12 of not meeting the state’s emissions reduction requirements and of being stranded with
13 significant costs of new infrastructure that may be retired early as Oregon advances
14 toward its climate goals.

15 **Q. Does the Company recognize the risk of decarbonization policies and market trends**
16 **as a risk to its current business model?**

17 A. Yes, to an extent. When discussing the need for a higher cost of equity, the Company’s
18 witnesses acknowledge the impact of decarbonization policies and market trends on their
19 business. Witnesses Coyne and Nelson testify that “[d]eclining costs and government
20 support for alternatives to gas space heating have created new risks for natural gas
21 utilities.”¹⁵ The witnesses then cite to the Brattle Group report that found the transition is

¹⁴ The Brattle Group, *Future of Gas Utilities Series, Part 1: Assessing Risk* at 11 (Aug. 2021),
https://www.brattle.com/wp-content/uploads/2022/01/The-Future-of-Gas-Utilities-Series_Part-1.pdf.

¹⁵ NW Natural/400, Coyne-Nelson/Page 47, lines 3 – 16.

1 already underway and that the number of homes with electric space heating could exceed
2 the number of homes with gas space heating by 2032.¹⁶ Two other Company witnesses
3 testify that the decarbonization policies in the Pacific Northwest have “increased the
4 perceived risk of investing in gas utilities”¹⁷ and that credit agencies are concerned about
5 the “ongoing energy transition risks in Oregon and Washington associated with the
6 implementation of decarbonization mandates and potential gas bans.”¹⁸ Indeed, the
7 Company shows a figure from Moody’s that finds gas-only utilities have a relatively high
8 carbon transition risk as compared to other capital-intensive energy industries, such as
9 electric utilities or dual-fuel utilities.¹⁹

10 Despite recognizing the risk that decarbonization policies and market trends are
11 impacting and will impact the Company’s business model, the Company does not have a
12 realistic plan for managing the risk. Instead, NW Natural proposes to continue growing
13 total gas system demand, and to continue expanding customer demand to support the
14 significant investments the Company is planning on making in its system, while at the
15 same time decarbonizing its system.

16 **Q. Why do you say that the Company does not have a realistic plan for achieving state**
17 **emission reduction targets?**

18 A. The Company identified its long-term plan, including its long-term emissions reduction
19 plan, in its 2022 IRP. The Company claimed that it could decarbonize its system while
20 simultaneously expanding customer demand to support the significant investments the

¹⁶ NW Natural/400, Coyne-Nelson/Page 47, lines 3 – 16.

¹⁷ NW Natural/100, Palfreyman-Kravitz/Page 19, lines 16 – 19.

¹⁸ NW Natural/300, Wilson/Page 11, line 19 – Page 12, line 3.

¹⁹ NW Natural/400, Coyne-Nelson/Page 49, lines 3 -9.

1 Company is planning on making in its system. In its IRP Order, the Commission
2 explicitly declined to acknowledge the Company’s “long-term analysis and selection of a
3 preferred portfolio.”²⁰ The Commission agreed with its Staff that the IRP did not
4 “adequately assess cost and risk” and did not “include reasonably accurate assessments of
5 all relevant inputs, including the uncertainty surrounding them.”²¹ The Commission
6 wrote that it was concerned with the IRP’s assumptions about the future cost and
7 availability of decarbonized fuels and agreed with Staff and interested parties that the
8 assumptions were not realistic.

9 The Commission was particularly concerned with the Company’s assumptions
10 about synthetic methane, which it said appeared “very optimistic, given the technology
11 pathway needed to produce synthetic gas from green hydrogen, followed by a
12 methanation process that involves carbon capture, and the associated expenses that would
13 be reasonable to assume would attend those processes and technologies.”²² The
14 Company’s assumption about synthetic methane is important because the Company’s IRP
15 demonstrated that NW Natural cannot achieve the state’s decarbonization goals using
16 “decarbonized fuels” without significant amounts of synthetic methane. The Company
17 needs abundant synthetic methane to meet future demand because no other alternative
18 fuel can sufficiently scale to replace gas on a 1:1 basis. As the Company’s IRP
19 demonstrated, there simply isn’t enough RNG (even without considering the competition

²⁰ *In the Matter of Northwest Natural Gas Company*, 2022 Integrated Resource plan, Docket No. LC 79, Order No. 23-281 at 7 (Aug. 2, 2023) <https://apps.puc.state.or.us/orders/2023ords/23-281.pdf>.

²¹ *Id.*

²² *Id.* at 9.

1 for RNG from the transportation sector) and green hydrogen can only be blended into the
2 system in limited quantities before the system needs to be completely rebuilt.

3 **Q. How does the Company's lack of a realistic plan to achieve the state's**
4 **decarbonization requirements relate to the LEA?**

5 A. The LEA incentivizes the traditional expansion of the Company's gas system, further
6 exacerbating the challenge for finding a pathway to meet the state's decarbonization
7 requirements and for maintaining affordable rates. Building electrification will be a
8 central component of the state meeting its decarbonization policies, which necessarily
9 means that the Company's demand will decline. The Company will have to invest in
10 building electrification (or at least support electrification investments made by others) to
11 meet state emissions reduction goals because it does not have commercially available,
12 cost-effective zero carbon alternatives available. Indeed, while considering Cascade
13 Natural Gas's IRP in a March 2024 Special Public Meeting, in a discussion about the
14 current cycle of Natural Gas Utility IRPs, which includes Northwest Natural's IRP,
15 OPUC Chair Decker stated,

16 If you see IRP results that demonstrate that there are a number of scenarios
17 in which you really can't meet the CPP goals without something that doesn't
18 exist yet, then makes it pretty clear that in order to meet them some amount
19 of electrification is going to be necessary.²³

20 Northwest Natural cannot continue to significantly expand its gas delivery
21 system, while simultaneously meeting decarbonization requirements and providing

²³ Or. Public Utility Comm'n, Special Public Meeting on Cascade Natural Gas Company's Integrated Resource Plan Acknowledgement, Docket No. LC 83, at 1:33 (Mar. 14, 2024), https://oregonpuc.granicus.com/player/clip/1294?view_id=2&redirect=true.

1 customers with affordable energy. A LEA, of *any* size, incentivizes the expansion of the
2 delivery system, thereby creating additional costs and risks for existing customers.

3 **Q. You mentioned that the Company is seeking a higher return on equity due to the**
4 **risk of decarbonization policies. Do you believe the Company's request for a higher**
5 **return on equity due to decarbonization policy risk is reasonable?**

6 A. No, I do not think it is reasonable for the Commission to increase the Company's return
7 on equity in this rate case due to the risk of decarbonization policies. The Company is
8 trying to have its cake and eat it too. On the one hand, the Company is acknowledging
9 that the energy transition poses a risk to its business when it is asking customers to pay its
10 shareholders more money to attract capital. On the other hand, the Company is
11 continuing to pursue a business-as-usual long-term plan that does not address the risks
12 and costs of the energy transition nor plan for achieving the state's emissions reduction
13 goals. There may come a time when a gas utility should receive a higher return on equity
14 to attract capital as the Company responds to the energy transition. But the Company
15 cannot have it both ways: it can't approach planning as if the future of gas is business-as-
16 usual while also demanding the return on equity of a utility that is adapting to the energy
17 transition.

18 Insofar as an increased return on equity is a financial incentive, the Commission
19 should only use this financial incentive for furthering the public interest. Insofar as an
20 increased return on equity reflects the risk premium utilities must offer investors to attract
21 capital, the Commission should condition this premium on the Company taking steps to
22 mitigate its risk by aligning its business strategy with state policy and market trends.

23 Such alignment will require the Company to incorporate electrification into its

1 decarbonization strategies and aim to avoid expanding its distribution system—the
2 opposite of what its LEA proposal would achieve.

3 **B. *Based on the public policies, market trends, and customer risks described above, the***
4 ***Commission should eliminate the LEA entirely***

5 **Q. What is your primary recommendation regarding LEAs?**

6 A. I recommend that the Commission end residential and commercial service and main line
7 extension allowances immediately as a LEA is not consistent with Oregon public policy
8 and is not in the public interest because it increases customer costs and risks. The
9 Commission should eliminate the service and main line extensions for these reasons.
10 Furthermore, as I will discuss in the next section of my testimony, the Company's
11 proposed LEA methodology suffers from several significant, problematic assumptions.

12 As a consequence of eliminating the Company's residential and commercial line
13 extension allowances, the Commission should also remove the Company's forecasted
14 spending on residential LEAs from the revenue requirement of \$419,000.²⁴ The
15 Company did not identify the revenue requirement associated with nonresidential
16 customers. On rebuttal, I will identify the nonresidential revenue requirement.

17 **Q. Why shouldn't the Commission maintain its existing allowance for residential**
18 **customers of 3x margin, which is set to take effect on November 1, 2024?**

19 A. Allowing the utility to provide new customers with a LEA is only reasonable if it is in the
20 public interest. However, as I have shown in my testimony, it is no longer in the public
21 interest for the Commission to incentivize the expansion of the gas delivery system by
22 providing any subsidy for connecting to the system, both because it is counterproductive

²⁴ Exhibit Coalition/111, NW Natural Response to Coalition DR 60.

1 for meeting the state's emissions reduction goals and because it exposes existing
2 customers to financial risks and costs that they may not recoup. The Governor's
3 Executive Order directed the Commission to exercise any and all authority to help
4 facilitate Oregon's achievement of the emissions reduction goals, and to determine
5 whether customer programs reduce risks and costs to utility customers by making rapid
6 progress towards reducing GHG emissions consistent with Oregon's reduction goals. In
7 the 2022 IRP, the Commission would not approve the Company's long-term plan, which
8 was premised on expanding the existing gas delivery system, because it was not realistic.
9 In its deliberations in the Cascade IRP, the Commission rightfully identified that some
10 level of electrification is necessary to achieve state emissions goals. It is illogical to
11 subsidize new residential and small commercial customer gas connections while also
12 recognizing that the availability of alternative fuels is insufficient to meet current demand
13 and that electrification will be necessary to reduce the utility's emissions, in no small part
14 because residential and small commercial customers are the least costly to electrify.

15 **Q. Why should the Commission eliminate the non-residential LEA?**

16 A. For the same reasons the Commission should eliminate residential line extensions,
17 namely that the policy is no longer in the public interest and exposes customers to
18 economic risk. The LEA is counterproductive for meeting the state's emissions reduction
19 goals and increases the costs and risks for existing customers.

1 **Q. Have any other gas utilities in Oregon agreed to eliminate their LEAs?**

2 A. Yes. Avista agreed to phase out its LEA in its 2023 Oregon General Rate Case, as
3 approved by this Commission.²⁵

4 **Q. Does this align with actions taken in other states that are working to address
5 emissions from the gas industry?**

6 A. Yes, several states and utilities have taken recent action to significantly reduce or
7 eliminate LEAs. In September 2022, the California Public Utilities Commission
8 eliminated all gas line extension allowances for the natural gas utilities in the state.²⁶ In
9 Washington, both Avista and Puget Sound Energy agreed to eliminate their LEAs
10 through rate case settlements.²⁷

11 In December 2023, the Massachusetts Department of Public Utilities (“DPU”)
12 issued its finding from its Investigation into the role of Gas Local Distribution
13 Companies for meeting the Commonwealth’s 2050 climate goals.²⁸ In its Order, the DPU
14 found that building electrification is necessary to achieve state policy goals, that gas

<https://fileservice.eea.comacloud.net/FileService.Api/file/FileRoom/18297602> (last visited Apr. 17, 2024).

1 utilities have a role to play in facilitating building electrification, and that the state needs
2 to modify its line extension policy. The DPU wrote:

3 to achieve the Commonwealth’s climate targets, there must be a significant
4 increase in the use of electrified and decarbonized heating technologies. The
5 Department and [gas distribution companies] can play a pivotal role by
6 enhancing incentives and expanding the Mass Save energy efficiency
7 programs to facilitate customer use of heat pumps.
8

9 The DPU also found it should “dissuade gas customer expansion” and recognized
10 the need for a review and modification of line extension policies to better reflect state
11 policies and goals and to move beyond “business as usual.”²⁹

12 Elsewhere on the East Coast, the Connecticut Public Utilities Regulatory
13 Authority ordered the winding down of the gas utilities programs for incentivizing the
14 expansion of the natural gas delivery system, concluding that the programs did not
15 provide benefits to both ratepayers and the environment and no longer furthered the
16 state’s overall climate and energy goals.³⁰

17 **C. *Even if the LEA were continued, NW Natural’s new proposed LEA methodology is***
18 ***unreasonable.***

19 **Q. Let’s turn back to the Company’s proposed new LEA methodology. Will you please**
20 **explain how the Company is proposing to change its LEA calculation methodology?**

21 **A.** Yes. The Commission had previously approved the use of setting the residential
22 allowance using what witness Therrien describes as the Revenue/Margin Multiplier
23 approach, which sets the allowance equal to a multiple of the expected margin of a

²⁹ *Id.* at 98

³⁰ State of Connecticut Public Utilities Regulatory Authority, Docket No. 21-08-24, Petition of William Tong, Atty Gen. for the State of Conn., and the Off. of Consumer Counsel for an Invest. into Eversource Energy Regarding Gas Expansion Marketing at 16 (Apr. 27, 2022), [https://www.dpuc.state.ct.us/dockcurr.nsf/4b3c728dd1c0d642852586db0069aa70/b09c5c63c09c2a25852588310054086c/\\$FILE/210824-042722.pdf](https://www.dpuc.state.ct.us/dockcurr.nsf/4b3c728dd1c0d642852586db0069aa70/b09c5c63c09c2a25852588310054086c/$FILE/210824-042722.pdf) (last visited April 17, 2024).

1 customer. In Order No. 22-388, the Commission set new residential customer allowances
2 at 5x margin with a cap of \$2,300 for LEAs from November 1, 2022, until October 31,
3 2023.³¹ The Commission decreased the multiplier to 4x margin until October 31, 2024,
4 and 3x margin beginning on November 1, 2024.

5 NWN is now proposing to use a Discounted Cash Flow (“DCF”) methodology,
6 which calculates a value based on the net present value (“NPV”) of the expected revenue
7 from new customers as compared to the NPV of the expected costs over a 25-year
8 planning horizon.

9 **Q. Why does the Company say it is proposing a change to its methodology?**

10 A. Witness Therrien argues that the 4x revenue margin method was no longer reasonable
11 because it was derived from pre-2012 assumptions for costs to serve new customers, but
12 since the regulatory environment is changing so should the methodology.³² Witness
13 Therrien cited the addition of CPP costs and the fact that new customers, on average, use
14 less gas than existing customers as new factors that will have an impact.

15 **Q. What is your response to the Company’s arguments for the need for a new**
16 **methodology?**

17 A. I find the underlying argument confusing, in part because it ignores cost-causation and
18 basic economics, which predictably leads to irrational results. Witness Therrien argues
19 that the Company’s existing methodology is no longer reasonable because “the
20 underlying cost of service is being redefined for new customers” and that while “using an
21 x ‘times’ approach can be an efficient way to administer an LEA in a static regulatory

³¹ *In the Matter of Northwest Natural Gas Company, dba NW Natural, Request for a General Rate Revision*, Docket No. UG 435, Order No. 22-388 at 51 (Oct. 24, 2022).

³² NW Natural/1900, Therrien/Page 16, line 17 – Page/17, line 3.

1 environment” it is not appropriate “when changes such as the addition of CPP costs to
2 revenue requirements are being implemented.”³³ Yet both examples cited by witness
3 Therrien, the costs of service being redefined by new customers and the addition of CPP
4 costs, imply that the allowance should decline relative to the existing methodology. The
5 Company’s proposed LEA is instead an increase relative to the existing LEA.

6 **Q. Please explain why the underlying cost of service for new customers should result in**
7 **a relative LEA decrease.**

8 A. The Company testifies that the average existing residential customer uses 650 therms
9 annually, while a new residential customer is expected to only use 449.5 therms. That is,
10 new residential customers use approximately 30% fewer therms, on average.

11 However, the expected annual usage of a residential customer is not related to the
12 cost to connect that customer to the system. The cost to connect a residential customer is,
13 for the most part, determined by factors that have little to do with the expected usage of a
14 customer.

15 Because the cost to connect a customer to the system is not related to the
16 customer’s expected demand, all else equal, a customer who uses more therms will be
17 more beneficial to the Company – and existing customers – than the customer who uses
18 fewer therms. That is because a portion of the fixed costs of the system is recovered
19 through the variable charge. However, the Company’s proposed LEA incentivizes the
20 addition of customers with lower usage, bringing the average use per customer down
21 without reducing the average costs per customer (because the cost to connect customers
22 is mostly not related to the customer’s expected demand). Under the Company’s

³³ NW Natural/1900, Therrien/Page 17, lines 17 – 20.

1 proposed methodology, customers with the least demand for gas would be rewarded with
2 a higher allowance than customers who use more gas and thus contribute more to the
3 fixed costs of the system. The reason for the Company's inverted proposal is because
4 CPP compliance makes it less valuable to the Company for customers to consume more
5 therms. However, adding new customers increases costs for existing customers and
6 increases the risk that the benefits of adding the new customer never exceed the costs.

7 **Q. How does the Company's proposed LEA increase risk for existing customers?**

8 A. Lower usage customers will take longer to repay their contribution back to the Company
9 than a higher usage customer. Lower usage customers are also more likely to only have
10 gas service to connect lower use appliances, such as a gas stove, rather than high use
11 appliances like a gas furnace. It is significantly cheaper, and thus easier, for a customer to
12 electrify a stove or another low use gas appliance than a gas furnace, thus increasing the
13 risk that the low usage customer departs the system before the Company has recovered its
14 allowance back from the customer.

15 The Company's proposal to increase the New Premise Customer Charge by more
16 than 200% would further incentivize new premise connections who only have low usage
17 appliances to electrify. While full electrification would bring these low-usage customers
18 into better alignment with state climate policies, under the Company's proposal this
19 would only happen after ratepayers are saddled with wasteful investment in these
20 customers' LEAs and any additional infrastructure procured to serve them. A more direct,
21 efficient, low-cost, and low-risk path to the same outcome would be to eliminate the line
22 extension allowance.

1 **Q. Please explain why including the CPP compliance costs should result in a relative**
2 **decrease, rather than an increase, for the LEA.**

3 A. In the last general rate case, the Commission found that the Company's LEA was too
4 high because it did not include the CPP compliance costs. The Company came back in
5 this rate case with a methodology that includes emissions compliance costs, but the
6 cumulative impact of all the Company's other changes to the methodology drastically
7 increases the LEA relative to the previous methodology.

8 Figure 2, below, highlights the directional absurdity of the Company's revised
9 methodology proposed in this rate case. If the Commission were to remove the emissions
10 compliance costs, the Company's proposed LEA for new residential customers would
11 increase on the order of 250% to 594% relative to the approved LEA cap beginning
12 November 1, 2024, depending on the customer's tier.³⁴ This 250-594% increase in the
13 initial LEA (i.e., prior to CPP compliance-related costs) is excessive since there have
14 been no disruptive regulatory, policy, or market changes that would warrant an increase
15 in the LEA of 250% to 594% in the absence of the CPP. That level of increase
16 demonstrates that the Company is substantially inflating the benefits of joining the gas
17 system in its new LEA model.

³⁴ Assuming a cap of \$1800.

Figure 2: Comparison of LEAs for New Customers³⁵

<u>Supplemental Testimony Proposal</u>				
Usage Tiers (therms)	0-250	251-450	451-650	650+
LEA	\$3,700	\$3,300	\$2,950	\$2,200

<u>Direct Testimony Proposal</u>				
Usage Tiers (therms)	0-250	251-450	451-650	650+
LEA	\$3,600	\$3,100	\$2,600	\$1,800

<u>Results Assuming No GHG Compliance Costs</u>				
Usage Tiers (therms)	0-250	251-450	451-650	650+
LEA	\$6,300	\$7,900	\$9,600	\$12,500

1 **Q. You said that the Company’s proposal for a tiered LEA is flawed because it rewards**
 2 **lower users with a higher allowance. Will you expand upon why you think this**
 3 **structure is flawed and problematic?**

4 **A.** Yes. The Company’s proposal is unreasonably risky for existing customers. I would go
 5 so far as to say that the Company’s program is the riskiest structure imaginable for
 6 existing customers. Ironically, the Company is sending an economic incentive to new
 7 residential customers to connect only non-space heating appliances and rely on the
 8 electric system for heating, thereby contributing to the electric system peak that witnesses
 9 Palfreyman and Kravitz identify as concerning in their testimony.³⁶ The Company is
 10 incentivizing customers to connect to the gas system, thereby incurring all the fixed costs
 11 of connecting, but then not efficiently using the system. This means that it will take
 12 longer to recover the costs of the incentive from those customers, increasing the risk to

³⁵ NW Natural/2000, Kravitz-Therrien/Page 23, line 8. The Company revised its LEA on supplemental testimony following the invalidation of the CPP. On Supplemental testimony, the Company used Washington Climate Commitment Act allowance costs as a proxy for future greenhouse gas emissions costs in Oregon.

³⁶ NW Natural/100, Palfreman-Kravitz/Page 7, lines 1 - 14.

1 existing customers. This risk is further elevated because non-heating end-use appliances
2 (like a stovetop or a fireplace) are considerably less expensive to convert as compared to
3 converting a gas furnace to a heat pump. It is also worth noting that an LEA, by
4 providing a customer subsidy, incentivizes low-usage customers to connect to the system
5 when they otherwise would not have, absent an LEA.

6 **Q. Do you have others concerns with the LEA calculation methodology?**

7 A. Yes, the Company makes several problematic assumptions that increase the risk for
8 existing customers and result in an even more inflated allowance. I will highlight several
9 of these:

- 10 • The Company's analysis is not linked to a scenario with a clear pathway for
11 meeting its emissions reduction requirements,
- 12 • The Company uses an excessively long 25-year planning period in its DCF,
- 13 • The Company forecasts extraordinary and uncertain growth in future capital
14 expenditures,
- 15 • The Company assumes an excessively high customer charge of \$26.25 per month,
16 which has not been approved by the Commission,
- 17 • The Company unreasonably assumes the same Operations and Maintenance
18 (O&M) costs in every year over the 25 years.

19 **Q. Do these assumptions have a material impact on the final LEA calculation?**

20 A. Yes. For example, I found that modifying just two of these assumptions to more
21 reasonable levels led to an LEA that was less than \$0. Specifically, I modified the DCF
22 analysis period to 10 years (rather than NW Natural's proposed 25 years) and modified
23 the Customer Charge to reflect its current level (rather than NW Natural's proposed

1 increase of >200% for new customers). I will explain why using a shorter analysis period
2 and rejecting the Company's New Premise customer charge is appropriate later in this
3 testimony. These two minor changes led to a LEA of -\$58 for a new customer with an
4 expected use-per-customer of 450 therms annually. To perform this calculation, I used
5 NW Natural's workpaper as provided in Exhibit 1905R (2002), and simply changed the
6 input values in cells C12 and C16.³⁷ Later in my testimony I will elaborate on why these
7 two changes are reasonable.

8 **Q. Let's walk through each of the problematic assumptions in the methodology. Please**
9 **start by describing the issue with the Company's emissions reduction assumptions.**

10 A. In its previous rate case Order, the Commission instructed the Company to include its
11 best reasonable estimate of present and future CPP compliance costs. The Company's
12 model shows that the Company does not expect to meet the emissions reduction limit
13 through the direct reduction of emissions nor through the purchasing of Community
14 Climate Investments (CCI).³⁸

³⁷ In the Company's model, the input assumption for the time period of the NPV calculation is embedded in the formula in cell C16, even though this cell is not explicitly labeled as an "input." Thus, for my own analysis, I modified the formula in cell C16 to reflect an assumed 10-year time period for the NPV calculation. Note that cell C6 of the same workpaper includes an input labeled as "NPV Number of Years." However, this labeling is misleading since the corresponding input value is solely used to calculate the model's assumed depreciation lifetime, not the time period selected for the NPV calculation. Changing input cell C6 in NWN's model does not change the time period for the NPV calculation. If cell C6 were also modified (in addition to cell C16), the resulting LEA would still be negative.

5

As shown in Figure 3, the Company does not anticipate reducing its direct emissions to meet state targets. The Company then assumes that it will rely on CCIs for compliance with the CPP. However, as shown in Figure 4, the Company also does not anticipate that it will be able to purchase sufficient CCIs for meeting the CPP beyond 2029.

2044	1,157,193	3,131,179	28,935,722

2 **Q. If the Company does not anticipate complying through direct emissions reductions**
3 **or CCIs, then how does the LEA methodology solve compliance with the CPP?**

4 A. The model assumes that the Company can purchase unlimited RNG at \$22/Dth in every
5 year of the model. This is a problematic assumption for two reasons. First, the
6 Company's RNG cost assumption is uncertain and optimistic. The Company's forecasted
7 RNG price assumption was a significant area of disagreement in the 2022 IRP.⁴²
8 Although Northwest Natural assumes a base level of RNG in its DCF model for the
9 entirety of the 25 years of the model, the Company does not actually have all of that

⁴¹ Exhibit Coalition/110, Cebulko/Page 2-4, NW Natural Response to OPUC DR 378, Attachment 2, Tab "CPP Proxy – Exhibit 1906R (2003)."

⁴² *In the Matter of Northwest Natural Gas Company*, 2022 Integrated Resource Plan, Docket No. LC 79, Order No. 23-281 (Aug. 2, 2023), <https://apps.puc.state.or.us/orders/2023ords/23-281.pdf>.

1 baseline RNG under contract through the end of the planning period, much less the future
2 RNG it will have to purchase for compliance with an emissions reduction program.⁴³

3 **Q. Based on its own modeling for the LEA and its 2022 IRP, can NW Natural rely**
4 **solely on RNG to mitigate GHG emissions associated with the customer growth an**
5 **LEA would promote?**

6 A. No. The model assumes the same price of RNG, regardless of the number of customers
7 added to the system. However, in reality, as demand increases, the Company will have to
8 move further up the supply curve for new resources, which are more expensive than the
9 previously selected resources. As there is a finite amount of RNG, the utility would have
10 to move onto more expensive compliance methods, like green hydrogen and synthetic
11 methane. Approving the LEA would in effect acknowledge the questionable assumptions
12 regarding future costs that NW Natural made in its 2022 IRP.

13 **Q. The CPP is not in effect, so why are the Company's assumptions problematic?**

14 A. Oregon still has an emissions reduction requirement to reduce the state's emissions at
15 least 45 percent below 1990 levels by 2035 and 80 percent below 1990 levels by 2050.
16 Although the CPP itself was invalidated for a procedural issue during the development of
17 the rules, the state emissions reduction target was not invalidated. The authorizing
18 Executive Order directed the Public Utility Commission of Oregon to "exercise any and
19 all authority and discretion vested in the by law to help facilitate Oregon's achievement
20 of the GHG emissions reduction goals."⁴⁴ Second, the Oregon DEQ has initiated a

⁴³ Exhibit Coalition/105, NW Natural Response to Coalition DR 215.

⁴⁴ Or. Exec. Order 20-04 at 3.

1 second rulemaking to restart the program, which is expected to take effect in 2025.⁴⁵ It
2 appears much more likely than not that Northwest Natural will soon have an emissions
3 reduction requirement that is closely aligned with the first iteration of the rule.

4 Given the high likelihood that the Company will have an emissions reduction
5 requirement during the 25-year period considered in the DCF model, the Company
6 baseline assumption should be that it meets the emissions reduction requirement. By
7 planning not to meet the presumed reduction requirements, the Company is artificially
8 deflating the cost of compliance which in turn boosts the LEA unreasonably.

9 **Q. Why is it problematic that the Company is using a 25-year period in its DCF**
10 **methodology?**

11 A. In a DCF model, the longer the period of time being considered the greater the
12 uncertainty about the results. A DCF estimates the value of an investment based upon its
13 expected generation of cash flow in the future. A longer planning period, such as 25
14 years, increases the uncertainty of the results because the Company is making
15 assumptions today about the distant future. For example, the Company is making
16 assumptions about the number of customers, the average-use-per-customer, the level of
17 future capital expenditures, the cost of capital, and future taxes for the year 2040. A small
18 change to an assumption has a greater impact on the results in an analysis with a longer
19 planning period relative to a shorter period. Forecasting is hard, and the longer time
20 horizon the less likely the utility is to be correct.

⁴⁵ Or. Dept of Env't Quality, Climate Protection Program 2024 Rulemaking Advisory Committee Meeting at 1 (Apr. 2, 2024), <https://ormswd2.synergydcs.com/HPRMWebDrawer/Record/6644612/File/document> (last visited Apr. 17, 2024).

1 Moreover, this Commission has explicitly found that it does not have confidence
2 in the Company’s plans for its future. The OPUC recently declined to acknowledge the
3 Company’s long-term plan in its IRP because the Commission lacked confidence that the
4 plan produced the best combination of risk and cost of utility customers.⁴⁶ In my
5 experience, it is rare for a Pacific Northwest public utilities commission to not
6 acknowledge an IRP, thus highlighting this Commission’s concern with the Company’s
7 long-term plan.

8 **Q. The Company’s model identifies a “revenue requirement breakeven year” for each**
9 **tier, occurring in year 10 or 11. What does the Company mean by a breakeven**
10 **year?**

11 A. The breakeven year refers to the year that the Company expects that the annual revenue
12 from the new premise customer will exceed the cost of service from that customer. In
13 other words, the new premise customer only begins to provide a positive annual benefit
14 in year 10 or 11. However, since the new premise customer generates net costs that
15 accumulate over the first 9 or 10 years, the new premise customer does not make up for
16 these costs and make existing customers “whole” or “indifferent” until year 25. My
17 concern is that the energy landscape is rapidly changing and the market and economic
18 conditions in 20 years could look very different than today, which means it is risky for
19 existing customers to wait 25 years to be left indifferent.

⁴⁶ *In the Matter of Northwest Natural Gas Company*, 2022 Integrated Resource Plan, Docket No. LC 79, Order No. 23-281 at 8, (Aug. 2, 2023), <https://apps.puc.state.or.us/orders/2023ords/23-281.pdf> (last visited April 17, 2024).

1 **Q. Is there a specific assumption that highlights your concern about making a forecast**
2 **for 25 years?**

3 A. Yes, the contributions to future non-growth capex. Non-growth capex is the Company's
4 term for capital expenditures it assumes it will have to make to maintain the system
5 regardless of growth. The Company assumes an incremental \$4.86 billion in non-growth
6 capital expenditures over the next 25 years.⁴⁷ The Company assumes an annual
7 incremental \$250 million in years 1 and 2, an annual incremental increase of \$205
8 million in years 3 through 5, and then an annual incremental increase of \$187.2 million
9 from years 6 through 2025. Based on my analysis of the Company's LEA model, using
10 all of the Company's favorable assumptions, the net benefit of adding a new premise
11 customer is largely due to the expected contribution to the rapidly escalating future capex
12 costs.⁴⁸ However, these contributions would only be realized if and when the
13 Commission approves the future capex costs and authorizes them to be included in retail
14 rates through future general rate cases

15 The Company's forecast of future capital is important because the LEA
16 calculation credits new residential customers with contributions to "new non-growth
17 capex" in the model. Essentially, the Company is assuming that it has to make these
18 future capital expenditure investments regardless of whether a new residential customer
19 comes onto the system. So, for every new premise customer the Company adds, that
20 customer contributes to the future capex costs thereby reducing the burden on existing
21 customers.

⁴⁷ Exhibit Coalition/110, Cebulko/Page 7, NW Natural Response to OPUC DR 378 Attachment 2, Tab "Financial Statements."

⁴⁸ *Id.* at row 13, "Net Available to Common."

The Company’s forecast about future capital expenditures is highly speculative and not reasonably verifiable by intervenors in a rate case. Moreover, as previously said, the Commission explicitly chose not to acknowledge the Company’s long-term plan in its 2022 IRP. It is reasonable to expect that the Company’s need to invest in non-growth capital expenditures will be lower relative to a business-as-usual case as customers partially or fully electrify. For example, in its Clean Heat Plan, the Public Service Company of Colorado assumed that its capital expenditure investments would decline in proportion to the Company’s decline in peak demand.⁴⁹

Q. If the Commission were to reject the Company’s proposed \$26.25 customer charge and maintain the \$8 customer charge, would that have an impact on the LEA?

A. Yes. Maintaining the customer charge at the current \$8/month, or even the Company’s proposed \$10/month for existing residential customers, would significantly reduce the expected annual distribution revenue for each tier. A reduction in the customer charge would increase the expected time it would take for the new premise customer to repay the LEA thereby increasing the risk for existing customers.

Table 3: Comparison of Annual Revenue per Expected Use-Per-Customer (“UPC”) Customer Based on Customer Charge

Monthly Customer Charge	250 UPC	450 UPC	650 UPC	1000 UPC
Proposed New Premise Residential: \$26.25/mo	\$541.62	\$722.92	\$904.22	\$1221.49
Proposed New Premise Multifamily: \$24.25/mo	\$517.62	\$698.92	\$880.22	\$1197.49
Proposed Existing Residential: \$10/mo	\$346.62	\$527.92	\$709.22	\$1026.49
Current Residential: \$8/mo	\$322.62	\$503.92	\$685.22	\$1002.49

⁴⁹ Col. Public Util. Comm., *In The Matter of The Application Of Public Service Company of Colorado For Approval of Its 2024-2028 Clean Heat Plan*, Docket 23A-0392EG, Hearing Exhibit 110, at 24 (Oct. 17, 2023) (Supplemental Direct Testimony of Jack W. Ihle, Figure JW1-SD-3, “2024-2050 Capital Investments”),

https://www.dora.state.co.us/pls/efi/efi_p2_v2_demo.show_document?p_dms_document_id=1008193&p_session_id= (last visited April 18, 2024).

1 **Q. What are your concerns with the Company's estimated O&M in LEA model?**

2 A. I am also concerned that the Company's O&M estimate is artificially low thereby
3 inflating the LEA. The Company assumes that the utility's O&M costs will be the exact
4 same in every year for the next 25 years. I would be surprised to see the Company's
5 O&M costs remaining constant for the next 25 years, given that labor costs are a
6 significant component of O&M. Particularly in the later years, maintaining artificially
7 low O&M costs inflates the LEA. The Company's static O&M costs stand in stark
8 contrast to the Company's assumed future capital expenditure assumptions, which as
9 previously stated, the Company assumes it will spend an incremental \$4.86 billion over
10 the next 25 years.⁵⁰

11 **Q. Earlier you identified 10 years as a more appropriate planning period than 25 years**
12 **for the DCF model. Please explain why.**

13 A. To preface, my primary recommendation is eliminating LEAs. However, a 10-year period
14 (or shorter) is more reasonable than a 25-year period because of the substantial
15 uncertainty about inputs used in the model that compound in the later years. These
16 uncertainties include future O&M costs, future capital expenditure costs, future customer
17 charge rates, future CPP compliance costs, and whether future Commissions will
18 authorize future rate increases to recover these future costs. Forecast errors compound in
19 the later years which further skews the results.

⁵⁰ Exhibit Coalition/110, Cebulko/Page 7, NW Natural Response to OPUC DR 378, Attachment 2, Tab "Financial Statements."

1 **Q. What is your conclusion and recommendation regarding NW Natural’s proposed**
2 **increase to its line extension allowance?**

3 A. I recommend the Commission reject NW Natural’s proposed increases to its line
4 extension allowance, because these costs are unreasonable and unjustified.

5 *D. NW Natural billed costs to ratepayers for residential line extensions that exceeded its*
6 *approved Service Line Extension Allowance.*

7 **Q. Does the Company provide residential service line extension allowances that exceed**
8 **the allowance maximum approved by the Commission?**

9 A. Yes, the Company is providing certain customers with allowances that exceed the
10 individual maximum allowance.⁵¹ That is, individual customers are receiving allowances
11 that exceed the margin factor identified in Schedule X, in some cases by tens of
12 thousands of dollars per customer.

13 **Q. How does the Company justify providing residential customers with allowances that**
14 **exceed the maximum LEA?**

15 A. The Company justifies it in two ways. First, the Company argues that its approach is
16 reasonable by averaging the costs across all the customers. In a data request to the
17 Company, Staff asked the Company to provide each residential line extension from 2019
18 in an Excel workbook. In its response to Staff, the Company provided the individual line
19 extensions as well as a Table that shows the average capital cost, customer contribution,
20 NPV and Present Value of Revenue Requirement (“PVR”) for each year. The Company
21 writes in its response to Staff that “[f]or each year in the analysis, the results indicate that
22 the portfolio of line extension investments were both financially prudent for the Company

⁵¹ Exhibit Coalition/103, NW Natural Response to Coalition DR 130.

1 (i.e., the NPV is positive) and beneficial for existing customers (i.e., the PVRR is
2 negative).”⁵²

3 Second, the Company states that customer contributions are determined before the
4 service line is installed based on estimated construction costs and there are times when
5 estimated and actual costs deviate.⁵³

6 **Q. Is it reasonable for the Company to average its line extension costs across all new
7 customers?**

8 A. No. The Company’s averaging approach appears to violate the terms of Schedule X,
9 which states that the “Construction Allowance per residential dwelling will be equal to
10 the factor shown below times the annual margin using the Base Rate and Base
11 Adjustment from the applicable Rate Schedule times the annual estimated therm usage
12 attributable to the *Applicant’s particular installation.*” (emphasis added).

13 **Q. Is the Company’s argument that it relies on estimated constructions and costs prior
14 to determining the customer contribution reasonable?**

15 A. No. I am concerned that relying on estimates sends a perverse financial incentive to the
16 Company and unreasonably shifts the entirety of the risk of the Company’s estimated
17 costs onto existing customers. The Company has a financial incentive to connect new
18 customers because it earns a rate of return for its shareholders on its capital expenditures.
19 If the Company overestimates the costs of the connection, then the allowance decreases
20 as does the likelihood the customer will connect to the system. The Company knows that
21 if it underestimates the cost of the project, it can shift those costs onto existing customers.

⁵² Exhibit Coalition/106, NW Natural Response to OPUC DR 138.

⁵³ Exhibit Coalition/103, NW Natural Response to Coalition DR 130.

1 Regardless, whether the estimate is accurate or not, the Company's shareholders benefit.
2 The Company, not existing ratepayers, should bear the risk of the Company's
3 construction cost estimates.

4 **Q. Are there any examples of individual customers receiving a LEA that exceeds the**
5 **maximum threshold?**

6 A. Yes. In 2023, one new construction residential customer received a Company
7 contribution of \$20,503 and contributed \$0.⁵⁴ Another customer in 2023 received a
8 contribution of \$14,389 while also contributing \$0.⁵⁵ Neither customer was income
9 qualified. Examining further back than 2023, there are examples of individual residential
10 customers receiving LEAs tens of thousands of dollars above the then-existing threshold.
11 One customer in 2020 converting their existing residential home received \$64,687 in
12 value while contributing \$0.⁵⁶

13 **Q. Does the Company offer an explanation as to veracity of the data?**

14 A. In its response to the Staff data request, the Company writes,

15 It is possible that, especially in the case of new construction developments
16 where a single applicant (such as a homebuilder) is adding multiple service
17 lines in the same area at the same time, costs across multiple premises can
18 be coded to a single workorder number. This has the effect of making some
19 line extensions at individual premises appear more costly than they were in
20 actuality, because the costs supported multiple line extensions at multiple
21 premises.⁵⁷

22 The Company has the responsibility to present accurate, complete data, and the
23 burden of proof in its rate case. If the Company's data request response is not accurate,

⁵⁴ Exhibit Coalition/107, Cebulko/Page 399, NW Natural Response to OPUC DR 138, Attachment 1, row 39,639.

⁵⁵ *Id.* at Cebulko/Page 399, row 39,866.

⁵⁶ *Id.* at Cebulko/Page 183, row 18,247.

⁵⁷ Exhibit Coalition/106, Cebulko/Page 2, NW Natural Response to OPUC DR 138.

1 then it is either incomplete or incorrect. Regardless, if the data is incomplete or
2 inaccurate, it is misleading and it is impossible to verify the reasonableness of the
3 Company's expenditures. In these specific examples, the meter, permit, and indirect
4 materials costs appear to be for individual customers. When asked to identify which
5 service line installations involved costs associated with multiple premises, the Company
6 only identified one in a list that identified the 24 with the highest cost.⁵⁸ The Company is
7 responsible for demonstrating the prudence of its expenditures and doing so requires
8 presenting clear and accurate information for review. Yet the Company admits that some
9 of the workorder information in the filing is incorrect.

10 **Q. Please explain why there is incorrect information in the Company's work orders.**

11 A. Through discovery, I asked questions to better understand why certain workorders were
12 so expensive and if those workorders were associated with multiple premises, as the
13 Company indicated was possible. The list of workorders included one residential
14 conversion customer in 2021 who received the value of \$86,553 while only contributing
15 \$1,353. In response, the Company replied that \$85,108.98 of the workorder was for tools
16 and equipment that had nothing to do with underlying line extension.⁵⁹ My discovery
17 question only identified 24 workorders so I am not certain the extent of the Company's
18 errors.

⁵⁸ Exhibit Coalition/104, NW Natural Response to Coalition DR 188.

⁵⁹ Compare *id.* with Exhibit Coalition/107, Cebulko/Page 295, NW Natural Response to OPUC DR 138, Attachment 1, row 29,487.

1 E. *Main Line Extension Allowance*

2 **Q. Does Schedule X allow the costs of Main Extensions in association with a new**
3 **residential customer installation to be socialized across the Company?**

4 A. Yes.

5 **Q. What is the maximum amount of Company contribution towards a Main**
6 **Extension?**

7 A. Based on my interpretation of the Company's workpapers, the Company's contribution to
8 ratepayers can be virtually unlimited (up to the total cost of the Main Extension project).
9 In dozens of cases the Company has included main line extension costs that exceed the
10 individual customer LEA where there is little or no customer contribution.⁶⁰ In several
11 cases, customers are receiving the benefit of more than \$20,000. The Company's
12 workpapers show that in some circumstances customers make substantial construction
13 contributions (thousands of dollars) but those appear to be less common than instances in
14 which the customer does not make a contribution but receives benefits that far exceed the
15 customer's LEA threshold. In any case, it is not clear as to why certain customers receive
16 substantial benefits that far exceed what is allowed under Schedule X.

17 **Q. How much has the Company contributed to Main Extension costs?**

18 A. According to the Company's data request responses, the capital costs are \$7 million, \$2
19 million from residential and \$5 million from commercial customers, from 2018 – 2023.⁶¹

⁶⁰ Exhibit Coalition/106, NW Natural Response to OPUC Data Requests 138.

⁶¹ Exhibits Coalition/106 and 108, NW Natural Response to OPUC Data Requests 138 and 139.

1 **Q. Is the Company's treatment of Main Extensions reasonable?**

2 A. No. If a Main Extension is required to connect a new customer to the system, then the
3 costs of the Main Extension should be included in the LEA evaluation and the
4 Company's service and main "allowance" should not exceed Schedule X's LEA cap. The
5 Company's witness seemingly agrees. Witness Therrien testifies, "[a] sound line
6 extension policy ensures that existing customers do not subsidize new customers, while
7 allowing a level of investment from the natural gas utility commensurate with the
8 incremental revenues from the new customers."⁶² Witness Therrien continues that to
9 determine the LEA, the Company "compares the expected future revenues of that single
10 new customer to the construction cost to connect that customer of a set period of time to
11 determine if an allowance is justified, and if the prospective customer must pay a
12 Contribution In Aid of Construction ('CIAC') to join the system."⁶³ Therrien identifies
13 expected construction costs to include the service line, meter, and if necessary, gas main
14 extension costs.⁶⁴ If the purpose of this refund is to achieve new revenue from new
15 customers, then the LEA should already reflect the upper limit of the incentive being
16 offered. Thus, even if the LEA were justified (which it is not), then any additional
17 incentive on top of that for attracting new customers via the Main Extension refund
18 cannot be justified.

19 I am also concerned that the Company did not present the Main Extension costs
20 and allowances in a transparent manner. The Company did not provide analysis or
21 workpapers to justify the additional Main Extension refund in the same manner that was

⁶² NW Natural/1900, Therrien/Page 5, lines 4 – 7.

⁶³ NW Natural/1900, Therrien/Page 5, lines 10 – 15.

⁶⁴ NW Natural/1900, Therrien/Page 5, lines 18 – 19 (emphasis added).

1 done for the service line costs and allowance. Thus, even if the Commission agreed that it
2 was permissible to provide customers with an unlimited Main Extension allowance upon
3 an appropriate factual showing, the Company has not provided sufficient information for
4 the parties to scrutinize the reasonableness of its data.

5 **Q. What are your disallowance recommendations for residential service and main line**
6 **extensions that exceeded the individual customer line extension allowance?**

7 A. I recommend that the Commission disallow all residential service and main line extension
8 costs that exceed the maximum threshold for each individual customer allowance. I found
9 that from 2018 to 2023, the Company spent \$16,232,335 on residential customer
10 allowances that exceeded the individual customer allowance. For the Test Year, 2023, I
11 found that the Company spent \$2,222,531 on residential customer allowances that
12 exceeded the individual customer allowance. I recommend that the Commission disallow
13 \$2,222,531 from the Test Year.

14 **Q. How did you calculate the disallowance?**

15 A. Through discovery, the Company provided a workbook that detailed each residential line
16 extension since 2018. To calculate the excess line allowance, I summed up the amount of
17 money the Company contributed to each customer that exceeded the individual line
18 extension allowance for the year. To calculate overage from 2018 through 2022, I
19 summed all Company contributions that were in excess of \$2875. To calculate the \$2.2
20 million disallowance, I summed all contributions that were in excess of \$2,300 in the year
21 2023. For example, if in 2023 the Company made an allowance contribution of \$3,000

1 but the line extension allowance threshold was \$2,300, the disallowance for that customer
2 would be \$700.⁶⁵

3 **Q. Does the Company provide non-residential service and main line extension**
4 **allowances that exceed the allowance maximum approved by the Commission?**

5 A. It is unclear. Schedule X states that utility will perform an investment analysis for each
6 customer to determine the allowance. Rather than identifying a cap, Schedule X identifies
7 a minimum allowance. Schedule X states that “At a minimum, the Construction
8 Allowance will equal 5.0 times the annual margin revenue that is estimated to be
9 generated from the operation of natural gas-fired equipment to be installed at the service
10 address.”⁶⁶ Based on the plain language of Schedule X, it does not appear the Company
11 requires any demonstration that adding a nonresidential customer to the system is in the
12 interest of other customers.

13 **Q. Is the Company’s policy to set a minimum rather than a maximum allowance**
14 **reasonable?**

15 A. No, the policy allows cross-subsidization. According to witness Therrien, an LEA is not a
16 subsidy because the prospective customer must bear the full cost of connecting to the
17 system.⁶⁷ Witness Therrien continues that “As long as the utility recovers sufficient
18 revenues to cover the customer’s cost to join the system, there can be no subsidy from
19 existing customers to new customers.”⁶⁸ The only way to ensure that the utility recovers

⁶⁵ \$3,000 - \$2,300 = \$700.

⁶⁶ Northwest Natural Gas Company, Schedule X, Sheet X-6, <https://www.nwnatural.com/about-us/rates-and-regulations/oregon-tariff-book> (General Schedules) (last visited April 17, 2024).

⁶⁷ NW Natural/1900, Therrien/Page 9, line 2 – 17.

⁶⁸ NW Natural/1900, Therrien/Page 9, line 10 – 12.

1 sufficient revenues to cover the customer's cost to join the system is to set a maximum
2 allowance.

3 **Q. Are there any individual non-residential allowances that concern you?**

4 A. Yes, dozens. For example, in 2019, the Company provided a commercial customer with
5 an allowance worth \$390,570 with \$0 contribution from the customer. \$386,466 of the
6 costs were associated with a Main Extension to the customer.⁶⁹

7 **Q. How much has the Company spent on nonresidential line extensions in recent
8 years?**

9 A. From 2018 – 2023, the Company has provided ~ \$18.4 million in allowances to
10 nonresidential customers.⁷⁰ In 2023, the Company provided ~ \$2.6 million in
11 nonresidential allowances.

12 **Q. Do you have a recommended disallowance for non-residential line extensions?**

13 A. Not at this time. Based on the information provided by the Company, I cannot determine
14 the appropriate line extension allowance for each individual customer. It is possible, as
15 for the residential customers, that the Company is providing an allowance that exceeds
16 the original estimate. I only discovered this issue late into drafting my testimony and I did
17 not have sufficient time to ask and receive discovery responses in time for inclusion.
18 However, I expect to address this issue further in Rebuttal testimony.

⁶⁹ Exhibit Coalition/109, Cebulko / Page 15, NW Natural Response to OPUC DR 139, Attachment 1 Amended, row 916.

⁷⁰ Exhibit Coalition/109, NW Natural Response to OPUC DR 139, Attachment 1 Amended.

1 **4. New Premise Customer Charge**

2 **Q. Please describe the Company's proposal for a New Premise Customer Charge**
3 **Schedule.**

4 A. The Company is proposing to create two new schedules, one for new premise residential
5 customers and another for new premise multifamily residential buildings. The distinction
6 between the two new schedules and the existing residential tariff is the customer charge.
7 The Company is seeking permission to charge new premise residential customers \$26.25
8 per month, an \$18.25 per month increase (i.e., a 228% increase) over the current
9 customer charge of \$8 per month, and \$16.25 per month more (i.e., 163% more) than the
10 Company is proposing for existing residential customers in this rate case (\$10 per
11 month). The Company is also proposing to create a new premise multi-family residential
12 schedule with a customer charge of \$24.25, a \$203% increase over current rates.

1

Table 4: Residential Customer Charge Proposal

	Current Customer Charge \$/month	Proposed Customer Charge \$/month	Percentage Increase
Existing Residential and Multi-Family Customer Charge			
Existing Single Family Residential Customer Charge	\$8	\$10	25%
Existing Multi-Family Residential	\$8	\$8	0%
Proposed Customer Charge for New Premise Customers connected after November 1, 2024			
New Premise Single Family Residential	\$8	\$26.25	228%
New Premise Multi-Family Residential	\$8	\$24.25	203%

2 **Q. What is a new premise residential customer?**

3 A. A new premise residential customer is a new single family or multi-family building that
 4 is connected to the system after November 1, 2024. The term reflects the connection of a
 5 new building to the gas system and does not have any association with the status of a
 6 customer. For example, a customer who is new to NW Natural’s service territory but
 7 moves into an existing single family or multi-family building that is already connected to
 8 the Company’s system would not be considered a new premise residential customer. That
 9 customer would take service under the existing residential tariff. In contrast, an existing
 10 customer who transfers their service to a newly constructed home would be required to
 11 take service as a new premise customer.

1 **Q. Why is the Company proposing a differentiated and higher customer charge for**
2 **new premise customers?**

3 A. The Company maintains that it is concerned about intra-class equity and by creating
4 separate customer charges, it will promote fairness and equity.⁷¹ The Company testifies
5 that new premise residential customers use, on average, approximately 30% fewer
6 therms. Witness Wyman testifies that the Company's weather normalized New Premise
7 residential customer uses 449.5 therms annually and the average existing residential
8 customer uses 650 therms annually.⁷² Witness Wyman argues that under the Company's
9 decoupling mechanism, the Company assumes that each new residential customer uses
10 650 therms. Thus, if new premise residential customers come onto the system but use
11 fewer therms, on average 449.5 therms, then the Company will be more likely to under
12 recover revenue and the Company would seek to collect the missing revenue from all
13 customers through the decoupling deferral.⁷³

14 Witness Wyman also testifies that a higher fixed rate promotes fairness and equity
15 because a "higher volumetric rate would impact higher users the most, including those
16 users who are least able to respond in the short run to higher price signals with energy
17 efficiency measures such as new appliance purchases and home weatherization."⁷⁴

⁷¹ NW Natural/1800, Wyman/Page 77 line 8 - Page 78 line 5.

⁷² NW Natural/1800, Wyman/Page 77, lines 7 – 16.

⁷³ Although witness Wyman testifies that the average new premise residential customers will use 449.5 therms annually, the Company's workpapers suggest it may in fact be lower, as they use 26.5 and 26.1 therms monthly (312 therms annually) for new premise single family and new premise multi-family customers, respectively. NW Natural/1803 and 1804, Wyman/WP 1 – Rate Spread and Rate Allocation Model.

⁷⁴ NW Natural/1800, Wyman/Page 77, line 22 - page 78, line 2.

1 **Q. Do you agree that the Company’s proposal to create separate tariffs for new**
2 **premise residential and new premise multi-family residential customers is in the**
3 **public interest?**

4 A. No, I do not. While I understand the intent of the Company’s proposal, I do not believe
5 that the Company’s proposal is in the public interest for five reasons:

- 6 1) High customer fixed charges decrease the incentive for customers to
7 efficiently manage their demand,
- 8 2) High customer fixed charges disproportionately impact lower-income
9 customers,
- 10 3) The Company’s proposal is a radical step to address what is at present a minor
11 issue in the decoupling mechanism, and
- 12 4) The Company’s proposal moves away from the existing decoupling policy in
13 favor of a new policy framework for fixed cost recovery – one that relies
14 heavily on fixed charges.
- 15 5) The Company’s proposal sends conflicting financial signals to housing
16 developers and customers, when combined with its LEA proposal, and
17 significantly undercuts the value of federal incentive programs under the
18 Inflation Reduction Act.

19 **Q. Please explain why you disagree with the Company’s proposed approach to setting**
20 **the customer charge.**

21 A. To start, I do not think it is sound regulatory policy to set a high customer charge. All else
22 equal, a higher fixed charge reduces customers’ ability to control their bills through
23 energy efficiency, conservation, demand response, and other demand-side management
24 opportunities. The Company’s logic that “a higher volumetric rate would impact those
25 who are least able to respond to price signals” misses the point that a higher fixed charge
26 hurts customers’ ability to control their bill even more than a higher volumetric rate, as a
27 customer cannot take any action to avoid the fixed charge, other than disconnecting from
28 the system. Shifting costs from volumetric to fixed charges also means customers who
29 are “least able to respond” will likely be “unable to respond.”

1 If the Company is trying to reduce the burden on customers who have a higher
2 energy burden, then increasing the fixed charge is the wrong approach. Lower-income
3 customers are more likely to be low usage customers. Thus, an increase in the customer
4 charge will increase monthly bills for low-usage customers (and will reduce monthly bills
5 for high-usage customers). I understand that the Company is proposing the increase only
6 for new premise connections. However, if a lower income customer moves into a new
7 premise that is connected to the system after November 1, 2024, then that customer will
8 experience a customer charge increase from \$8 to either \$24.25 or \$26.25, depending on
9 if the building is a multi-family or single-family residence.

10 **Q. Why do you think the Company's proposal is a radical step?**

11 A. As earlier stated, the Company argues that under its decoupling mechanism, the
12 Company assumes that each new residential customer uses 650 therms. Therefore, if new
13 customers come onto the system but use fewer therms, on average 449.5 therms, then the
14 Company will be more likely to under recover revenue and the Company would seek to
15 collect the missing revenue from all customers through the decoupling deferral. The
16 Company's proposal – to increase the customer charge by more than 200% for all new
17 premise customers – is a massive increase in the customer charge and a substantial
18 departure of existing Oregon regulatory practice.

19 For the Commission to adopt the Company's radical proposal in this case, I would
20 expect the Company to demonstrate imminent financial harm without intervention.

21 However, I did not see Company analysis that quantifies the impact new premise
22 residential customers will have on its decoupling mechanism, either in the near term or in
23 the long term. The Company provided an "Example of its Current and Proposed Monthly

1 Decoupling Calculation” for a single month⁷⁵ and it is not clear to what extent that
2 information can be used for purposes beyond understanding the decoupling calculation.
3 However, based on the Company’s testimony, I imagine that the near-term impacts to the
4 decoupling mechanism of adding new premise customers will be *de minimus*. The
5 Company testifies that it expects to add ~ 4,000 residential customers during the Test
6 Year, or less than 1% of its current residential customer base.⁷⁶ There are several
7 variables that have much more meaningful impacts on the decoupling mechanism and the
8 potential for under recovery, the foremost being the impact of weather on customer
9 demand.

10 The Company has not put forth evidence in this case that the impact of these new
11 customers is a significant enough issue that the Commission must address this issue in
12 this case, much less that the Company’s proposed fix – a \$16.25 or \$18.25 increase to the
13 customer charge for new premise customers – is the right approach to address the
14 decoupling mechanism issue. I agree with the Company that there may be a discrepancy
15 between the average use-per-customer of new premise customers (i.e., ~450 therms) and
16 what is presently assumed in the decoupling mechanisms (i.e., ~650 therms). It is also
17 possible this discrepancy could eventually become a meaningful issue for timely cost
18 recovery at some point in the future.

19 However, I believe the Company’s proposal has not demonstrated that this issue
20 is significant enough at present to warrant such a radical new approach to rate design or
21 the Commission’s decoupling policy. There are more reasonable and more incremental

⁷⁵ NW Natural/1701, Walker/Page 1; NW Natural/1703, Walker/Page 1.

⁷⁶ NW Natural/1700, Walker/Page/12, lines 12 – 16.

1 steps that can and should be taken first to resolve the discrepancy the company has
2 identified, with fewer collateral consequences.

3 **Q. Are there other ways the Company could modify its decoupling mechanism to**
4 **mitigate the Company's concern?**

5 A. Yes, the Company could modify its expected residential use-per-customer in the
6 decoupling mechanism to account for the impact of the new premise residential
7 customers. This would be a relatively straightforward, incremental step that does not
8 require a radical new rate design. It also would build upon the existing decoupling policy
9 framework that the Commission has already approved. In contrast, the Company's
10 proposal, in essence, seeks to move away from the existing decoupling policy in favor of
11 a new policy framework for fixed cost recovery – one that relies heavily on fixed charges.

12 **Q. Would adjusting the decoupling use-per-customer require existing customers to**
13 **subsidize new premise customers?**

14 A. It may to some degree, but some level of cross subsidization is inherent to ratemaking
15 (including decoupling mechanisms) and the Commission regularly has to decide when it
16 is and is not appropriate. For example, in general, urban customers subsidize rural
17 customers. Public utility commissions ("PUCs") have long considered cross
18 subsidization, in some situations, to be in the public interest. It is impractical to charge
19 individual customers their individual cost of service, so PUCs organize customers into
20 rate classes. PUCs can make distinctions between groups of customers when there is a
21 clear distinction, and it is in the public interest to draw that distinction. As I stated above,
22 I am unconvinced that the cost of new premise customers is a meaningful issue that has to
23 be solved today. More so, I believe that the negative impacts created by the Company's

1 proposal to dramatically increase the customer charge for new premise customers are not
2 justified given that the Company has failed to demonstrate that there is a substantial
3 problem today.

4 **Q. How would a 200+% increase in the fixed charge affect energy affordability for low-**
5 **income and energy burdened customers?**

6 A. In the same way that it hurts all customers, except by definition, a higher fixed charge
7 hurts more for low income and energy burdened customers as they have less
8 discretionary income. Low income and energy burdened customers who are also low
9 usage customers would experience both an increase in their bill and a reduction in their
10 ability to control their bill because of the shift of costs from volumetric rates to the
11 customer charge.

12 **Q. Does the proposed customer charge have a relationship to the Company's proposed**
13 **LEA?**

14 A. Yes, and I am concerned about the conflicting financial incentives the Company is
15 simultaneously sending to housing developers and to gas customers when considering
16 both the Company's new premise customer charge and Company's LEA proposal. With
17 the LEA, the Company is providing a direct financial incentive to housing developers to
18 connect the gas system, but with fewer end-uses and lower expected throughput.
19 Meanwhile, once connected to the system, gas customers would be "locked in" to a high
20 fixed charge that does not encourage lower consumption. In some cases, those new
21 customers may be better off not taking any gas service as a means to avoid the very high
22 fixed charge. However, the LEA still encourages developers to connect those customers
23 to the gas system. In fact, I believe the Company's proposal to adopt such a high fixed

1 charge for new customers is significantly at odds with the Governor's priority to increase
2 housing affordability for new construction.

3 **Q. Does the proposed customer charge have an interaction with the state and federal**
4 **climate policy?**

5 A. Yes. The Company's proposed high fixed charge significantly undercuts the value of
6 federal incentive programs currently being rolled out under the Inflation Reduction Act.
7 Specifically, the volumetric savings realized by installing high-efficiency electric
8 appliances will be greatly diminished by a high fixed charge, and thus customers may be
9 less likely to take advantage of these programs (which are a significant piece of U.S.
10 climate policy). Importantly, the federal programs specifically target low-income
11 customers, so they will be disproportionately discouraged from participating in and
12 benefiting from these federal programs.

13 **Q. Does this conclude your testimony?**

14 A. Yes.

WITNESS QUALIFICATION STATEMENT

NAME: Brad Cebulko

EMPLOYER: CEB Energy Consulting LLC

TITLE: Founder

ADDRESS: 24125 47th Ave SW Vashon, WA 98070

EDUCATION: MPA, Environmental Policy, University of Washington
BA, Political Science, Colorado State University

EXPERIENCE:

Energy regulatory expert who specializes in gas and electric regulation before public utilities commission. Worked for Strategen Consulting for 2.5 years, led Strategen's gas transition practice, and worked with governmental clients, non-governmental organizations, and consumer advocates in regulatory proceedings and at legislatures across the country. Managed and supported projects for numerous client engagements related to issues in this proceeding including line extension allowances and rate design. Worked for Washington Utilities and Transportation Commission for 8 years; the first 3 as a regulatory analyst in the Conservation and Energy Planning Section of Staff and for 5 years as a policy advisor to the commissioners. Testified before the Oregon Public Utilities Commission (Docket No. UE 299, UG-461), the Washington Utilities and Transportation Commission (Docket Nos. UE-140188/UG-140189, UE-150204/UG-150205, UE 151871/UG-151872, UE-220066/UG-220067/UG-210918, UE-220053/UG-220054), Illinois Commerce Commission (Docket Nos. 23-0066, 23-0068/23-0069), Michigan Public Service Commission (Docket No. U-21148), Massachusetts Department of Public Utilities (Docket No. 22-32), and Minnesota Public Utility Commission (Docket No. 21-138), Colorado Public Utilities Commission (Docket 23A-0392EG), and Connecticut Public Utilities Regulatory Authority (23-11-02). Represented numerous clients by drafting written comments, providing technical assistance, presenting oral comments and participating in

technical workshops on a wide range of electric and gas proceedings at utilities commissions in Washington, Oregon, Minnesota, Illinois, Michigan, Massachusetts, Connecticut, New York, Colorado, and Nevada.

Brad Cebulko

CEB Energy Consulting LLC * (317) 519-3165 * CEBenergyconsulting@gmail.com

Professional Summary

Brad is an energy regulatory expert who specializes in gas and electric regulation before public utilities commission for clients who are committed to pursuing a just and equitable energy transition. Brad has submitted expert witness testimony and comments on a wide range of regulatory issues including rate allocation and rate design, low-income ratepayer issues, performance-based regulation, electric and gas long-term planning, capital investment planning, and gas utility decarbonization policy. Brad has prior experience at Strategen Consulting and the Washington Utilities and Transportation Commission.

Education

Master of Public Administration

University of Washington - Seattle, WA (2012)

Bachelor of Arts Political Science

Colorado State University – Fort Collins, CO (2006)

Work Experience

Founder, CEB Energy Consulting, (March 2024 – Present)

- Works with consumer advocates and public interest organizations on gas and electric regulatory issues before state public utility commissions.

Senior Manager, Strategen Consulting, (2021 – March 2024)

- Led Strategen’s gas transition practice, which included regulatory and legislative strategy, prudence reviews, and gas infrastructure planning.
- Worked with state regulatory commissions, consumer advocates, non-profits, and other clients to advance the public interest in regulatory decision-making.
- Developed testimony, comments, reports, and analysis on a subject matter including gas utility decarbonization strategies, performance-based regulation, electric and gas resource planning, fuel costs, energy efficiency, and low-income ratepayer issues.

Senior Policy Advisor for Energy Strategy, Washington Utilities and Transportation Commission (2016 – 2021)

- Advised the Commissioners on electric and gas utility regulation and legislation.
- Led major Commission policy initiatives through Commission orders, policy statements, and rulemakings, including developing rules for the Clean Energy Transformation Act.
- Chair of the Staff Subcommittee on International Relations at NARUC.

Regulatory Analyst, Washington Utilities and Transportation Commission (2013 – 2016)

- Testified before the commission in suspended utility filings and general rate case proceedings.
- Led Commission Staff's review of natural gas integrated resource plans and energy efficiency filings.

Expert Testimony

Southern Connecticut Natural Gas Company and Connecticut Natural Gas Company 2024 Rate Case (DKT: 23-11-02) on Behalf of Sierra Club and Conservation Law Foundation

Direct and Rebuttal Testimony

Filed testimony examining the Companies capital investments plans and decarbonization programs.

[Case Details](#) | [Direct Testimony](#) | [Rebuttal Testimony](#)

Public Service Company of Colorado 2024-2028 Clean Heat Plan (DKT: 23A-0392EG) on Behalf Western Resource Advocates and Rewiring America (2024)

Testimony and Report

Filed a report and testimony examining the review the utility's capital investment plan, assessed the benefits of zonal electrification, assessed the capital and operation & maintenance (O&M) costs for blending hydrogen into the distribution system, and assessed the reasonableness of the Company's synthetic natural gas (SNG) assumptions.

PacifiCorp 2023 Washington General Rate Case (DKT: UE-230172) on Behalf of The Energy Project (2023)

Response Testimony

Filed testimony on the Company's proposed electric performance metrics. Proposed a more comprehensive portfolio of metrics that measures the utility's performance to provide affordable, clean, equitable, and reliable power.

[Case Details](#) | [Direct Testimony](#)

Northern Illinois Gas Company Proposed General Increase in Rates and Revisions to Other Terms and Conditions of Service (DKT: 23-0066) on Behalf of Environmental Law & Policy Center, Environmental Defense Fund, Natural Resources Defense Council, and Illinois State Public Interest Research Group, Inc (2023)

Direct and Rebuttal Testimony

Filed testimony on capital expenditures, line extension allowances, non-pipeline alternatives, gas system planning, performance metrics, and residential rate design.

[Case Details](#) | [Direct Testimony](#) | [Rebuttal Testimony](#)

The Peoples Gas Light and Coke Company 2023 Proposed General Increase in Rates and Revisions to Other Terms and Conditions of Service (DKT: 23-0068 and 23-0069) on Behalf of Environmental Law & Policy Center, Environmental Defense Fund, Natural Resources Defense Council, and Illinois State Public Interest Research Group, Inc. (2023)

Direct and Rebuttal testimony

Filed testimony on capital expenditures, line extension allowances, non-pipeline alternatives, gas system planning, performance metrics, and residential rate design.

[Case Details](#) | [Direct Testimony](#) | [Rebuttal Testimony](#)

Avista 2023 Oregon Gas General Rate Case (DKT: UG-461) on Behalf of Sierra Club and Climate Solutions (2023)

Direct Testimony

Filed testimony on Avista's compliance plan for meeting Climate Protection Program compliance, non-pipeline alternatives, and line extension policy. Through settlement, Avista agreed to initiate non-pipeline alternative analysis in its integrated resource plan, phase out its line extension allowance policy by 2027, and delay seeking recovery of Climate Investment Cost Recovery.

[Case Details](#) | [Direct Testimony](#) | [Final Order](#)

Puget Sound Energy 2022 Electric and Gas General Rate Case (DKT: UE-220066, UG-220067, and UG-210918) On Behalf of The Energy Project (2022)

Response Testimony

Filed testimony on Gas and Electric Performance Metrics and Electric Time-of-Use Rate Pilot. Through settlement, PSE agreed to modify its Time of Use pilot and track performance metrics that closely aligned with The Energy Project's proposals

[Case Details](#) | [Response Testimony](#) | [Settlement Testimony](#)

Liberty Utilities RNG Program (DKT 22-32) On Behalf of Sierra Club (2022)

Direct Testimony

Filed testimony recommending the Massachusetts Department of Public Utilities reject Liberty's proposed Voluntary Renewable Natural Gas Program because it was costly and the Company's proposal would have double counted the environmental attributes of the project. The Department of Public Utilities largely relied on Sierra Club's testimony when it reject the Company's proposed RNG program.

[Case Details](#) | [Direct](#)

PacifiCorp 2022 General Rate Case (DKT UE 399) On Behalf of Vitesse LLC (2022)

Direct and Rebuttal Testimony

Filed testimony on behalf of Vitesse LLC, a wholly owned subsidiary of Meta, on the proposed design of PacifiCorp's voluntary green tariff program for large customers. The Oregon PUC approved a multi-party settlement that made several revisions to the program based on my testimony.

[Case Details](#) | [Direct](#) | [Rebuttal](#)

Consumers Energy 2022 Natural Gas General Rate Case (DKT U-21148) On Behalf of Michigan Environmental Council, NRDC, and Sierra Club (2022)

Direct Testimony

Direct testimony on Company's proposal build and operate a RNG facility, and the Company's line extension allowance policy. Through settlement, the Company agreed not to seek recovery of the RNG facility and to update the utility's line extension allowance assumptions.

[Case Details](#) | [Direct](#)

Xcel Energy, Minnesota Energy Resources Corp, CenterPoint Energy (DKT: 21-138) On Behalf of Minnesota CUB (2021 – 2022)

Direct and Rebuttal Testimony

Filed direct and rebuttal testimony on the prudence of the three gas utilities extraordinary gas costs during Winter Storm Uri in 2021. The Minnesota PUC relied, in part, on Strategen's testimony to find nearly \$60 million in imprudent costs for the gas utilities. The Commission also accepted Strategen's recommendation to initiate gas utility long-term planning.

[Case Details](#) | [Direct](#)

Puget Sound Energy Proposed Leasing Program (DKT: UE-151871/UG-151872) On Behalf of Washington UTC Staff (2016)

Filed direct testimony opposing the Company's proposed end-use appliance leasing program for not being in the public interest. The Commission agreed that the program was poorly structured and was unlikely to benefit participants and non-participants

Selection of Relevant Experience

Tennessee Valley Authority 2024 Integrated Resource Plan on Behalf of GridLab and The Nature Conservancy (2024)

Technical and Policy Support

Providing technical and policy assistance to The Nature Conservancy during its participation in the TVA IRP stakeholder work sessions.

Nevada Public Utilities Commission Natural Gas Utility Integrated Resource Planning Rulemaking on Behalf of Western Resource Advocates (2024)

Technical and Policy Support

Providing technical and policy assistance to Western Resource Advocates in its participation in the PUCN's rulemaking. Drafted proposed comprehensive rules and supporting arguments.

A Regulator's Blueprint for 21st Century Has Utility Planning, A Report for Advanced Energy United (2023)

[Report](#)

Led the development of a report that provided a blueprint for state public utility commissions that are interested in developing gas utility planning requirements to improve transparency into gas utility resource and capital investment plans.

New York State Electric & Gas Corporation and Rochester Gas and Electric Corporation Initial Long-Term Gas System Plan on Behalf of Sierra Club and Earthjustice (2024)

A Review of the Initial Long-Term Plan

Developed a report that analyzed the Companies' alternative fuel assumptions, electrification costs, capital forecast, technological assumptions for electrification technologies, benefit-cost analysis, and implementation of non-pipeline alternatives ("NPAs").

Comments on CenterPoint Energy's Natural Gas Innovation Act (NGIA) Pilots in Minnesota on Behalf of Fresh Energy (2023)

Comments

Provided technical support and comments to client on components of CenterPoint's filing including its proposed hydrogen blending facility, an RFP for renewable natural gas, and residential and commercial gas heat pump pilots.

Minnesota Public Utilities Commission Investigation into Gas Utility Resource Planning on Behalf of the Citizen's Utility Board of Minnesota (2023)

[Comments](#)

Providing technical support to client on the Minnesota Commission's consideration of natural gas utility long-term planning.

Nonpipeline Alternative Analysis Framework for the Colorado Public Utilities Commission on Behalf of Lawrence Berkeley National Laboratory (2023)

[Part 1 | Non-Pipeline Alternative to Natural Gas Utility Infrastructure Report](#)

[Part 2 | Non-Pipeline Alternatives: A Regulatory Framework and a Case Study of Colorado](#)

Through a collaboration with Lawrence Berkeley National Laboratory and the Colorado Public Utilities Commission, I led the development of two reports that first examined the existing regulatory approaches for non-pipeline alternatives, and then proposed a regulatory framework.

Comments to the Oregon Public Utilities Commission on Northwest Natural Gas Company's 2022 Integrated Resource Plan on Behalf of Coalition of Climate Advocates (2023)

[Natural Gas IRP](#)

Provided technical support to a coalition of climate-focused organizations, and frontline community organizations, on the gas utility's plans for meeting future customer demand while complying with Oregon and Washington emissions reductions requirements.

Consolidated Edison and Orange & Rockland’s 2023 Initial Long-Term Gas System Plan on Behalf of Sierra Club and Earthjustice (2023)

[*A Review of the Initial Long-Term Plan*](#)

Provided a review of the gas utilities’ initial Long-Term Plan with a focus on electrification assumptions, alignment of capital investment spending and load forecast, nonpipeline alternative analysis, and reasonableness of scenarios for meeting emissions reduction requirements.

National Fuel Gas Distribution Corporation 2023 Long-Term Gas System Plan on Behalf of Sierra Club and Earthjustice (2023)

[*Comments on Electrification Assumptions*](#)

Provided comments on NFG’s technological and cost assumptions for various electrification technologies, cost basis for the crossover temperature for heat pumps, and electrification adoption curves. Strategen then proposed several recommendations for adjustments that NFG could make in this proceeding, or future LTPs, to better represent the technical capacity and emission reduction potential of electrified heating systems.

Consumers Energy Gas Bill Impact Analysis: A Case Study of the Effects of Planned Capital Expenditures and Electrification Trends on Behalf of Advanced Energy United (2023)

[*White Paper*](#)

Quantified the impact of gas utility capital improvement projects on customer rates Consumers Energy gas in Michigan. The paper found that Michigan residential customers with Consumers Energy can expect to see their gas bills steadily increase over the next decade – up to 49% over 2021 levels – due to projected utility capital expenditures and electrification trends.

White Paper on the Relationship of Gas and Electricity Prices in New England on Behalf of Sierra Club (2023)

[*White Paper*](#)

Co-authored a white paper that provides background and context on the implications of recent electricity price spikes in New England and the relationship between natural gas prices and electricity prices.

Nevada Gas Utility Decarbonization Planning 2022 Legislative Proposals on Behalf of GridLab and SWEEP (2023)

Technical and Policy Advice

Providing a coalition of climate-focused advocates with technical and policy guidance on legislation for gas planning requirements

Presentations to Western States on Planning for Decarbonizing Gas Utilities on Behalf of Advanced Energy United (2022-2023)

Presentations

Led Strategen's collaboration with AEU to develop a series of presentations for Western State Public Utility Commission commissioners on how to plan for the decarbonization transition of natural gas utilities.

Designing Building Electrification Incentives for Washington State on Behalf of Climate Solutions (2022)

Technical and Policy Advice

Developed funding scenarios that would allow Washington State to meet building decarbonization targets. Solutions focused on rebates for high-efficiency electric appliance retrofits and community-centered weatherization programs.

Washington Utilities and Transportation Commission Proceeding to Develop a Policy Statement Addressing Alternatives to Traditional Cost of Service Rate Making, (DKT: U-210590) On Behalf of The Energy Project (2022)

Policy Statement

Supported client, the low-income advocate in Washington, on comments on regulatory goals, outcomes, and performance metrics.

[Case Details](#) | [Comments](#)

Comments to the Minnesota Public Utilities Commission on Natural Gas Planning (DKT: 21-135) On Behalf of Citizens Utility Board of Minnesota (2022)

[Comments](#)

Provided technical and policy guidance to the Minnesota Commission on how gas planning, operational changes, and risk sharing can help protect customers from future natural gas price spikes like that occurred during February 2021.

Puget Sound Energy 2023 Natural Gas Integrated Resource Plan on Behalf of Climate Solutions (2023)

Natural Gas IRP

Supported client's review of the Company's development of the inputs and assumptions used in the IRP.

Michigan Public Service Commission, Renewable Natural Gas Study Workgroup (DKT: U-21170) On Behalf of Michigan Environmental Council, NRDC, and Sierra Club (2022)

Workgroup

Supported clients' review of the development of the study including submitting comments to the PSC.

Kentucky Utilities and Louisville Gas and Electric Company General Rate Case (DKT: 2020-00350) On Behalf of the Kentucky Public Service Commission (2021-2022)

General Rate Case

Supported the Kentucky PSC evaluate testimonies on PURPA rates and set new rates for the utilities.

[Case Details](#) | [Final Order](#)

Minnesota Power 2021 Integrated Resource Plan (DKT: 21-33) On Behalf of Citizen Utility Board of Minnesota (2022)

Electric IRP

Supported client's review of the Company's IRP.

Data Request Response

Request No.: UG 490 Coalition DR 130

Please refer to Attachment 1 to NW Natural's Response to OPUC DR 138, Columns N and O, labeled "Customer Contribution" and "Total Less Customer Contribution."

- Please explain why in some cases the Customer Contribution identified in Column N is significantly lower than the Total (shown in Column M). For example, in row 29,487, the total is \$87,906, while the customer contribution is only \$1,353. This would leave a difference of \$86,553 which is much greater than the authorized Line Extension Allowance value.
- Please explain whether the difference between these values (i.e., Column O) is being recovered by NW Natural through its base rates or is being proposed for recovery in this case.
- Please explain what actions NW Natural is taking to recoup the costs shown in Column O from the new customers that incurred them.

Response:

The Company objects to this data request in that it does not admit to the characterizations of "significantly lower than" or "much greater than." Without waiving this objection, the Company states as follows:

Customer Contributions are determined up-front, before the service line is installed, based on estimated construction costs. There are times when estimated and actual costs deviate, due to a variety of reasons. These reasons may include rocky soil conditions, burdensome restoration requirements, and landscaping issues, to name a few. Some of these said issues require specially equipment, which may add thousands of dollars to the cost that was unforeseen at the time of the estimate.

It is important to note that the referenced example in the data request is an outlier to the overall portfolio of new service lines added within the last five years. Line extensions in aggregate have been positive NPV, negative PVRR each year in question.

For line extension assets installed prior to October 31, 2023, the Company is recovering these costs in base rates. For any assets installed after October 31, 2023, they are included for recovery in this proceeding.

The Company seeks customer contributions when the estimate exceeds the line extension allowance. As noted above, these estimates are determined upfront, before the line extension is installed. Unforeseen expenses above the estimate are recovered through general rates, not the specific customer requesting service.

Response:

The Company objects to this data request under 860-001-0500 because the request for is burdensome and not commensurate with the needs of this case, the resources available to the parties or the importance of the issues to which the discovery relates. Without waiving this objection, the Company responds as follows:

Please refer to Confidential UG 490 Coalition DR 188 Attachment 1 for the information requested in parts (1) and (2). For part (3), most of the work orders listed here appear to have captured the correct charges; there are, however, instances where costs were inadvertently misallocated to some of these work orders. For example, Work Order 3673369 includes charges from a vendor not associated with Customer Acquisition work. Also, Work Order 3668635 includes internal crew labor hours charged to a single work order rather than distributing time across multiple work orders. Each example is discussed in more detail below. For the documents relied upon for these examples, and a reconciliation with the values found in Column G of UG 490 Coalition DR 176 Attachment 1 for these specific work orders, please refer to UG 490 Coalition DR 189.

- Work Order 3673369. This work order includes construction tools and equipment shipping and rental cost of \$85,108.98 from a vendor that the Company does not use for Customer Acquisition work (DP Nicoli) and appears to be incorrectly coded. The tools and equipment include steel plates, a hydraulic cylinder, and multiple build-a-box shields (an aluminum modular trench shield system) which are not generally used for new residential services work. These items were shipped to Seaside, Oregon, yet Work Order 3673369 was for a residential conversion service line connection in Lake Oswego, Oregon. The tools and equipment line item represents \$85,108.98 of the \$87,334.39 service line cost (97.5%).
- Work Order 3668635. This work order includes internal NW Natural crew labor hours that were charged to a single work order, when these hours should have been distributed across multiple work orders. The internal hourly regular and vehicle overhead line items represents \$32,789.83 of the \$33,744.17 service line cost (97.2%).

Data Request Response

Request No.: UG 490 Coalition DR 215

Please refer to NW Natural's response to OPUC DR 378 Attachment 2, tab "CPP Proxy - Exh 1906(R) (2003)."

- a. Please identify the units for rows 9–11, "Normalized Load," "Non-Combustion Exclusion," and "RNG."
- b. The workbook forecasts 11,540,147 units of RNG in each year from 2024 until 2044. Does the Company have the RNG forecasted in row 11 under contract for each year until 2044? If not, please identify in which years NW Natural does not have the full amount under contract.

Please provide all contracts for RNG procured for 2024, and to the extent possible provide documentation that those contracts will provide RNG through 2042.

Response:

- a. The units for "Normalized Load", "Non-Combustion Exclusion" and "RNG" are all in therms.
- b. The volume of RNG in row 11 was the forecasted amount during the current gas year (November 1, 2023 – October 31, 2024) at the time of filing. The Company does not have the RNG under contract each year until 2044. However, the Company intends to purchase more and more RNG to comply with the proxy Oregon emissions policy and believes the amount included in the LEA model is conservative. The Company has three offtake agreements and two RNG investments. **[START CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]** Please see the offtake agreements attached as Highly Confidential UG 490 Coalition DR 215 Attachment 1, Highly Confidential UG 490 Coalition DR 215 Attachment 2, and Highly Confidential UG 490 Coalition DR 215 Attachment 3. **[START CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]**

Request for a General Rate Revision
Data Request Response

Request No.: UG 490 OPUC DR 138

For each residential line extension since 2018, please provide in an Excel workbook:

- a. The total cost of the line extension disaggregated by expense type.
- b. The cost of the line extension:
 - i. Funded by the customer.
 - ii. Not funded by the customer (include how costs are recovered, any applicable rate spread, and methodology).
- c. The census block of the customer.
- d. The expected annual usage of the customer
- e. Whether the customer has ever been a part of the Company's Income Qualified Bill Discount Program.

Amended Response:

The Company is filing this amended response to UG 490 OPUC DR 138 in order to provide a more complete accounting of customer contribution data than was provided in its original response. The Company has realized that its original customer contribution data query did not pull in all data from its prior customer records management system for the years 2020 through 2023. This amended response updates the Customer Contribution column in Table 2 of UG 490 OPUC DR 138 Attachment 1 Amended which, in turn, impacts the Total Less: Customer Contribution column in the same table. These updates further impact the Customer Contribution, Net Capital Cost, NPV, and PVRR columns of Table 1 of DR 138 Attachment 1 Amended for the years 2020 through 2023. The Company's amended response is as follows:

- a. Please refer to UG 490 OPUC DR 138 Attachment 1 Amended. Attachment 1 Amended presents the aggregate portfolio costs, by year (2018 through 2023), of all Oregon residential line extensions with average construction costs, customer contributions, and costs net of customer contributions. See Table 1. The Company has also calculated the net present value ("NPV") and present value of revenue requirement ("PVRR") for the portfolio of residential line extensions, by year. For each year in the analysis, the results indicate that the portfolio of line extension investments were both financially prudent for the Company (i.e., the NPV is positive) and beneficial for existing customers (i.e., the PVRR is negative).

Attachment 1 Amended also indicates line extension costs for the following categories: Service line, meter, permit, indirect materials, and share of main extension cost (if necessary to connect that premise). Together, these categories represent total line extension construction cost.

Every row in Attachment 1 Amended Table 2 represents an individual line extension, which is tied to a unique workorder number in the Company's data system. The Company presents these data with several caveats. It is possible that, especially in the case of new construction developments where a single applicant (such as a homebuilder) is adding multiple service lines in the same area at the same time, costs across multiple premises can be coded to a single workorder number. This has the effect of making some line extensions at individual premises appear more costly than they were in actuality, because the costs supported multiple line extensions at multiple premises. This is the reason, for instance, that some individual line extensions in Attachment 1 Amended Table 2 indicate low or negative cost values. Also, the costs for recent line extensions (i.e., in the latter months of 2023) may not have yet been applied to the associated workorder, which can be another reason for low values. Further, multi-family line extensions indicated in Attachment 1 Amended Table 2 can represent the addition of multiple customers living in multiple residential dwellings at a single premise and service line, and in these cases the construction allowable will be higher compared to a single dwelling.¹ Multi-family line extensions are also more likely to require longer service lines to reach each customer's meter.

Finally, line extension construction costs can vary by type. Generally, conversion and spot-lot line extensions can have higher costs relative to new construction extensions.² This is due to higher jurisdictional and permitting fees and flagging and street and right-of-way restoration costs.

For these reasons, the Company's analysis shown in Attachment 1 Amended Table 1 as well as its forthcoming supplemental response to UG 490 OPUC DR 136 presents a more accurate representation of the overall costs and benefits of residential line extensions for the Company as well as existing customers.

- b. Please refer to UG 490 OPUC DR 138 Attachment 1 Amended Table 2 for:
 - a. The cost of the line extension funded by the customer is found in the column labeled, "Customer Contribution" and is treated as CIAC.
 - ii. The cost of the line extension not funded by the customer is found in the column labeled, "Total Less: Customer Contribution." As per OAR 860-

¹ Per the Company's Schedule X tariff, Sheet X-5, the Construction Allowance is calculated based on number of residential dwellings added, not the number of service lines installed.

² Spot-lot line extensions are those associated with new residential construction in already developed areas or neighborhoods (e.g., infill development).

021-0051: “Each gas utility shall develop, with the Commission’s approval, a uniform policy governing the amount of main extension which will be made free to connect a new customer. This policy should be related to the investment that can prudently be made for the probable revenue.” The LEA, historically and proposed, are designed to ensure that NW Natural collects enough revenues from the new customer to recover the costs of the investment from that customer over time.

- c. Please refer to UG 490 OPUC DR 138 Attachment 1 Amended Table 2 for the column labeled, “Census Block.”
- d. The expected annual use-per-customer for new residential premises on the Company’s system is 449.4 therms (“New Premise UPC”). For a narrative summary of the New Premise UPC analysis, please refer to NW Natural/1800, Wyman/21-24.
- e. Please refer to UG 490 OPUC DR 138 Attachment 1 Amended Table 2 for the column labeled, “Enrollment in Income Qualified Bill Discount Program.” This field indicates whether the customer at each premise is enrolled in this program as of February 2024. Please note that the line extension applicant may not be the customer that currently resides at the premise.
