Request No.: UG 490 OPUC DR 139

For each non-residential line extension in the since 2018, please provide in an Excel workbook:

- a. The total cost of the line extension disaggregated by expense type.
- b. The cost of the line extension:
 - i. Funded by the customer.
 - ii. Not funded by the customer (include how costs are recovered, any applicable rate spread, and methodology).
- c. The census block of the customer.
- d. The expected annual usage of the customer.

Amended Response:

The Company is filing this amended response to UG 490 OPUC DR 139 in order to provide a more complete accounting of customer contribution data than was provided in its original response. The Company has realized that its original customer contribution data query did not pull in all data from its prior customer records management system for the years 2020 through 2023. This amended response updates the Customer Contribution column in Table 2 of UG 490 OPUC DR 139 Attachment 1 Amended which, in turn, impacts the Total Less: Customer Contribution column in the same table. These updates further impact the Customer Contribution and Net Capital Cost columns of Table 1 of DR 139 Attachment 1 Amended for the years 2020 through 2023. The Company's amended response is as follows:

- a. Please refer to UG 490 OPUC DR 139 Attachment 1 Amended. Attachment 1 Amended presents the aggregate portfolio costs, by year (2018 through 2023), of all Oregon non-residential line extensions with average construction costs, customer contributions, and costs net of customer contributions. See Table 1. Note that the Company has not calculated the net present value ("NPV") and present value of revenue requirement ("PVRR") for the portfolio of non-residential line extensions because these customers do not have comparable costs, margins, or load. Rather, each non-residential line extension is individually evaluated on an NPV/PVRR basis to determine the appropriate line extension allowance based on the expected throughput to the customer.

Attachment 1 Amended also indicates line extension costs for the following categories: Service line, meter, permit, indirect materials, and share of main extension cost (if necessary to connect that premise). Together, these categories represent total line extension construction cost.

Every row in Attachment 1 Amended Table 2 represents an individual line extension, which is tied to a unique workorder number in the Company's data system. The Company presents these data with several caveats. It is possible, especially in the case of new construction developments where one applicant is adding multiple service lines at the same time, that costs across multiple premises can be coded to a single workorder number. This has the effect of making some line extensions at individual premises appear more costly than they were in actuality, since the costs supported multiple line extensions at multiple premises. This is the reason, for instance, that some individual line extensions in Attachment 1 Amended Table 2 indicate low or negative cost values. Also, the costs for recent line extensions (i.e., in the latter months of 2023) may not have yet been applied to the associated workorder, which can be another reason for low values.

Finally, non-residential line extension construction costs can vary by business type and location, which can impact service line length, jurisdictional and permitting fees, and flagging and street and right-of-way restoration costs.

For these reasons, the Company's analysis shown in Attachment 1 Amended Table 1 as well as its forthcoming supplemental response to UG 490 OPUC DR 137 presents a more accurate representation of the overall costs of non-residential line extensions.

- b. Please refer to UG 490 OPUC DR 139 Attachment 1 Amended Table 2 for:
 - i. The cost of the line extension funded by the customer is found in the column labeled, "Customer Contribution" and is treated as CIAC.
- c. The cost of the line extension not funded by the customer is found in the column labeled, "Total Less: Customer Contribution." As per OAR 860-021-0051: "Each gas utility shall develop, with the Commission's approval, a uniform policy governing the amount of main extension which will be made free to connect a new customer. This policy should be related to the investment that can prudently be made for the probable revenue." The LEA, historically and proposed, are designed to ensure that NW Natural collects enough revenues from the new customer to recover the costs of the investment from that customer over time. Please refer to UG 490 OPUC DR 139 Attachment 1 Amended Table 2 for the column labeled, "Census Block."
- d. Due to high variability in non-residential services with regards (but not limited) to premise and building size, equipment types, market segment, and space heating

versus processing load needs, the Company does not have an expected annual usage for non-residential line extension applications.
