Notes:

- 1) To determine which plants are primarily coal fired, EIP cross-referenced the plants in the ICR data with EPA's Clean Air Markets database, which includes a description of a unit's "primary fuel." Plants that had capacity burning coal as a primary fuel were flagged as coal-fired plants.
- 2) CCW disposal units identified by evaluating waste descriptions for all waste streams that are associated with coal combustion waste (CCW). If a disposal unit handles any type of waste that was flagged as CCW, it was designated as a CCW disposal unit.
