RE: MI-11 Voters' Support for the American Jobs Plan

On behalf of Environment America and Earthjustice, Hart Research conducted a survey of 301 voters in Michigan's eleventh congressional district (MI-11). The interviewing was done using live telephone calls from May 10 to 13, 2021 and the state voter file was the basis for the sample. The margin of error for the overall results is $\pm 5.7\%$.

Summary

After hearing about the American Jobs Plan (AJP), a strong majority of voters in MI-11 say they want Congresswoman Stevens to vote in favor of its passage. Voters in the district favor both the overall plan and each of its core components. What's more, a majority of district voters favor its passage even without votes from Republican members of Congress, as long as voters across the partisan spectrum support the plan—which, the survey finds, they do.

Additionally, voters in this district support the plan's multipronged focus on addressing climate change by reducing carbon pollution and supporting energy efficiency, as well as providing targeted assistance to disadvantaged communities that are most harmed by pollution. They also strongly favor investing in clean energy, such as wind and solar power.

Furthermore, these voters favor the proposed funding mechanisms for the AJP, including partially rolling back tax cuts on corporations and eliminating taxpayer-funded subsidies for oil and gas corporations.

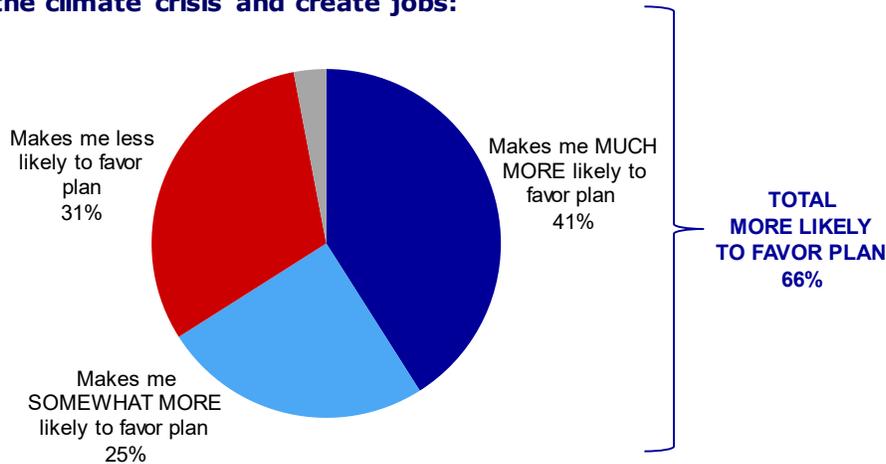

Key Points

- 1. By a 30-point margin (60% to 30%), voters in MI-11 favor the American Jobs Plan, including about two in five voters (40%) who strongly favor it.**
 - While the AJP is President Biden's proposal and enjoys nearly unanimous support from Democrats (96%), it's notable that support for the plan extends well beyond this group: 42% of non-Democrats—including 54% of independents—support it.
- 2. On multiple measures, voters in this district clearly signal that the provisions of the American Jobs Plan that focus specifically on addressing climate change and reducing pollution (with an emphasis on investing in clean energy) add to their favorable assessment of the proposal. Simply put, the climate and clean energy components of the plan are a significant selling point for voters in this district.**
 - When told that the plan includes a major emphasis on investments to expand the use of clean energy, such as wind and solar power, in order to tackle the climate crisis and create jobs, voters overwhelmingly say that this approach makes them more likely to favor the AJP. Two-thirds (66%) of voters express

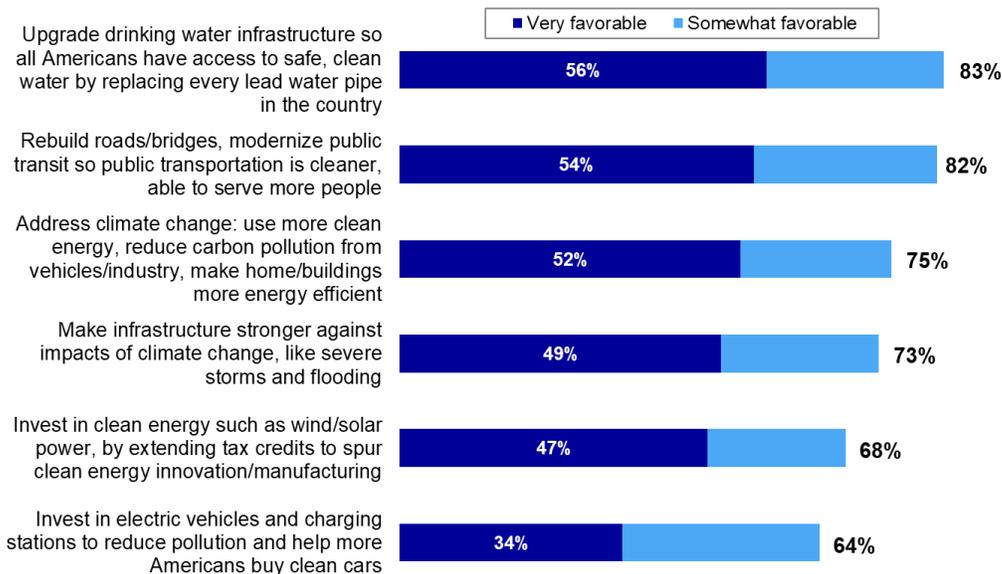

this view, including 41% who say this focus makes them much more likely to favor the plan. Among non-Democrats, half say this component makes them more favorable toward the overall plan.

- Setting a goal of generating 100% of America’s electricity from clean energy sources by 2035 to reduce carbon pollution receives a similarly enthusiastic response, with nearly two-thirds (64%) of voters in favor of this aim.
- Additionally, the AJP’s goal of targeting 40% of its climate investments toward disadvantaged communities that are most harmed by pollution also receives broad support: 68% of voters favor this specific provision, including 62% of independents.

The AJP includes a major emphasis on investments to expand the use of clean energy, such as wind and solar power, to tackle the climate crisis and create jobs:

3. Voters express overwhelming support for a broad set of core components of the American Jobs Plan. In fact, all six aspects of the proposal that were tested—ranging from improving roads, bridges, and mass transit to investing in clean energy—are viewed favorably by strong margins. Notably, three-fourths (75%) of voters support the AJP’s goal of addressing the challenge of climate change.

4. In fact, district voters are so positive toward the American Jobs Plan that, by 28 points (60% to 32%), they say they want Congresswoman Stevens to vote in favor of it. And more than half of voters say the AJP should pass as long as it has the support of Americans across the partisan spectrum (and it does), rather than holding out for support from Republican members of Congress.

- A majority (54%) of voters agree that the plan “should become law as long as Americans across the country who are Democrats, Republicans, and independents support it,” while just 30% believe that it “should only become law if members of Congress from both parties support it.” Non-Democrats feel this way by 16 points (49% to 33%).

5. Voters identify a range of important, tangible benefits they expect to occur if the American Jobs Plan is passed, from fighting climate change to spurring economic growth.

- A majority (52%) of voters express confidence that the AJP would “reduce the harmful effects of climate change.” And by a 59% to 31% margin, voters expect that the proposal would “improve the quality of life in many communities.”
- Furthermore, voters in this district anticipate that the AJP will boost jobs and improve the economy. Nearly three in five voters (59%) say that the proposal would “create good jobs across the country” and would “grow the U.S. economy” (57%).

6. Voters’ support for the American Jobs Plan is strong and approximately three in five voters support rolling back the 2017 corporate tax cuts and ending federal subsidies for oil and gas companies to pay for it.

- About three in five voters (59%) favor partially rolling back the 2017 corporate tax cuts by moving the corporate tax rate to 28% (from the current 21% level) in order to help pay for the AJP.
- Similarly, voters support ending taxpayer subsidies for oil and gas companies to help pay for the plan, with 61% of voters in the district saying they favor this approach.
