The Honorable Andrea Stewart-Cousins
Senate Majority Leader
188 State Street
Legislative Office Building, Room 907
Albany, NY 12247

The Honorable Carl Heastie
Assembly Speaker
188 State Street
Legislative Office Building, Room 932
Albany, NY 12248

Re: Call for the passage of A.7389-C/S.6486-D to institute a two-year moratorium on new fossil fuel permits for proof-of-work cryptocurrency mining and to direct an environmental review

Dear Majority Leader Stewart-Cousins and Speaker Carl Heastie:

We, the undersigned organizations, businesses, labor, and faith groups, write today to urge you to swiftly pass A.7389-C (Kelles)/S.6486-D (Parker) to place a two-year moratorium on the issuance of new air permits and air permit renewals for electric generating facilities that use fossil-fuels that provides in whole, or in part, energy used for Proof-of-Work cryptocurrency mining, and to direct the Department of Environmental Conservation (DEC) to conduct an environmental review.

These “mining” activities, particularly Proof-of-Work (PoW) *cryptocurrency mining* use enormous amounts of energy to power the mega computers needed to validate transactions on their network. For New York to meet its climate goals, it will be critical for energy consumption to decrease and for fossil fuels to be phased out – this legislation is necessary to help achieve these steps.

Should this activity expand in New York, it could drastically undermine New York’s climate goals established under the Climate Leadership and Community Protection Act.

This legislation takes a very measured approach to this emerging concern by placing a two-year moratorium on permits for fossil fuel-based proof-of-work cryptocurrency mining and instructing DEC to conduct an environmental review of cryptocurrency mining. *This legislation would not impact current operations, or operations that utilize renewable energy sources. Additionally, the legislation does not prevent anyone from purchasing or using cryptocurrencies.*

Digital currencies require authentication to prevent fraudulent transactions. PoW is the method that has the most significant energy demands. In PoW authentication, complex mathematical equations are assigned to each transaction and miners compete to solve them. The first one to solve an equation authenticates the transaction and wins currency for their effort. The equations can only be solved by brute force guesswork, so the person or company with the most computational power wins the most currency. With some currencies valued at over [\\$40,000 a coin](#), albeit in a highly speculative market, a global

digital gold rush is taking place with millions of mega “computers,” known as ASIC's (Application Specific Integrated Circuits), competing for an edge in the market.

In New York, crypto mining operations using warehouses full of computers have set up shop in upstate areas siphoning electricity from New York’s grid, “re-powering” defunct fossil-fueled power plants, thus seriously jeopardizing the state’s progress on and meeting mandates for reducing greenhouse gas (GHG) emissions.

Environmental concerns regarding proof-of-work mining can be summarized as the following:

- **The energy use from proof-of-work mining is out of this world.** If Bitcoin were a country, it would rank in the top 30 countries of energy users worldwide—between Norway and Argentina.¹ The Bitcoin network uses about the same amount of electricity as Washington State does yearly.²
- **Proof-of-work mining stands to jeopardize meeting global and New York State climate goals.** New York State has goals under the Climate Leadership and Community Protection Act to reduce greenhouse gas emissions 80% below 1990 levels by 2050, achieve 70% renewable energy for electricity by 2030. New York doesn’t currently have enough renewable energy to power existing needs, let alone an industry this energy consumptive. The energy consumption from proof-of-work mining operations would prevent the state from meeting these important goals.
- **Proof-of-work mining at power plants could jeopardize water quality.** These facilities require large quantities of water to generate energy, and the water returned to water bodies or wastewater treatment facilities is significantly hotter than the water withdrawn. Fluctuations in water temperatures can negatively impact the chemistry of water bodies and the ability of certain aquatic species to survive, as well as wastewater infrastructure.
- **Proof-of-work mining generates enormous levels of electronic waste.** The ASIC miners used at most mining operations have a lifespan of between 18 to 24 months. According to one estimate, cryptocurrency mining produces 30,700 tons of e-waste *annually*.³ This waste impacts low-income communities disproportionately.⁴

Additionally, there are very few jobs created by crypto mining, with profits accruing to the few, but the environmental impacts affect us all, particularly low-income communities that are often located near fossil fuel power plants and have been disproportionately affected by ongoing and legacy contamination.⁵ Additionally, BIPOC and low-income communities are often near polluting peaker plants – these polluting facilities could be kept online longer if crypto mining continues to ramp up statewide energy demands.

Most of the energy generated at these power plants will not go into the electrical grid. Instead, it is being used by private technology companies where the financial rewards remain with the companies themselves and their investors, while the environmental impacts are externalized, impacting our community, our state, and our ever-warming world.

There are other forms of validation for cryptocurrencies that can be, and are, used, such as the proof-of-stake mining methodology, which utilizes over 99% less energy than proof-of-work mining. Other less energy-consumptive methods include proof-of-authority, open representative voting, federated consensus, proof-of-activity, and proof-of-burn.

Passing A.7389-C/S.6486-D to pause proof-of-work cryptocurrency mining that utilizes fossil fuels is critical to ensure New York doesn’t undercut its landmark climate law and protects communities. We urge swift passage of this legislation this session.

Thank you for your time and consideration of our comments.
